134

Ultramatrix™ Diamond
Coring Bits

RQ™ Coring Rods, South Africa

ABOUT BOART LONGYEAR

Boart Longyear is the industry's leading integrated drilling services and products provider, combining engineering excellence, global manufacturing facilities and the most experienced drilling services group in the business. Our customers rely on our unique ability to develop, field test, and deliver all combinations of drilling consumables, capital equipment, and expertise to any corner of the world.

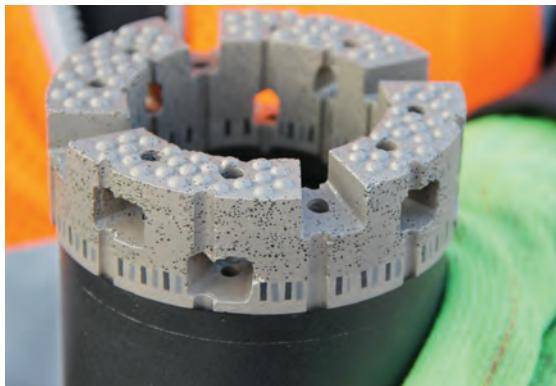

EXPLORATION DRILLING PRODUCTS

Boart Longyear is globally recognized as the leader in exploration drilling technology. From the rig and the drill string, to the innovative Stage™ diamond coring bit at the bottom of the hole, our customers trust us to deliver the most advanced and complete solutions available.

Wireline Components

- Core barrel assemblies
- Water swivels and hoisting plugs
- Subs and adaptors
- Overshots and recovery tools

Diamond Products

- Surface set bits
- Impregnated bits
- Reamers
- Casing shoes
- PCD bits
- Carbon bits

RC Consumables

- Rods
- Swivels
- Swivel accessories
- Subs

Rods and Casing

- Q™ and Patented RQ™ Drill Threads
- Coring Rod
- Casing

Exploration Drill Rigs

- Surface core drills
- Underground core drills
- Multi-purpose drills
- Reverse circulation drills
- Sonic drills

OTHER DRILLING PRODUCTS

In addition to our exploration drilling technology, Boart Longyear also engineers and manufactures world-class drill rigs and consumables for construction, overburden and percussive drilling.

Construction Drilling Consumables

- DeltaTools™ rods and casing
- DeltaTools™ bits and casing shoes
- DeltaTools™ jet grouting tools

Aftermarket Support

- Genuine spare parts
- Spare part kits
- First-aid drill repair boxes
- Maintenance programs

Rock Drill and Blast Rigs

- Production drill rigs
- Rock drills and breakers
- HRT consumables
- Threaded bits, rods, couplings, and shank adaptors
- Tapered bits and rods
- Integral drill steel
- Down-the-hole hammer bits

Rod Lifter, Split Tube Loader

SAFETY FIRST

Rod Lifter 8
Split Tube Loader 10

ROD LIFTER PART #: 5008890

Global Drilling Products

Boart Longyear's Global EHS Management System revealed that the leading injury on most job sites involves hands. In an attempt to keep workers safe, we make significant efforts to eliminate work-related risks through product engineering. In combination with automated rod handlers, designed to keep workers safely away from machinery, we also provide a number of hand-tool solutions to eliminate hand injuries.

Rod Lifter* Part#: 5008890

- Ergonomically keeps the wrist and hand in a neutral position and eliminates strain
- Removes fingers from pinch points and sharp surfaces
- Allows for proper lifting techniques and body positioning
- Prevents thread damage
- Prevents pipe slippage through the use of a specially designed carbide grip

*Patent pending

SPLIT TUBE LOADER PART#: 5006293

Global Drilling Products

Boart Longyear is pleased to introduce the Split Tube Loader. In the field, it is often documented that split tubes and the outer casing become sharp and contain metal burrs. Drillers have continually received hand lacerations and injuries due to these conditions, many times even through protective gloves. The Split Tube Loader is an innovative tool designed to eliminate these injuries.

Split Tube Loader* Part#: 5006293

- Ergonomically fits drillers' hands, keeping fingers away from dangerous areas
- Fits multiple split tube diameters with one device
- Eliminates hand contact with sharp edges

* US Patent No. D676,877; AU Design No. 338,612; CA Design No. 141,642; Patents Pending.

GENUINE Q™ WIRELINE SYSTEM

History	14
Roller Latch™ Technology	15
Core Barrel System Overview	16
Genuine Q™	18
Configurations and Options	20

WIRELINE CORE RETRIEVAL SYSTEM HISTORY

Boart Longyear developed the wireline core retrieval system in 1958, being the first diamond drilling exploration product manufacturer to offer this revolutionary system. The wireline system increased productivity on the work site and made tripping core from the bottom of the hole safer for the drilling assistant.

Prior to introducing wireline technology, crews were required to pull the entire rod string out of the ground to gain access to the conventional core barrel located behind the drill bit. Once the core barrel was emptied, the complete rod string would be lowered into the exploration hole prior to drilling the next core run.

The introduction of wireline technology allowed for the retrieval of the full inner-tube without the need to pull the rod string out of the hole. This is accomplished by creating a completely independent inner-tube which isn't attached to the rod string but directly rests at the bottom of the rod string, behind the drill bit. Mounted at the top of the inner-tube assembly is a device called a head assembly.

The head assembly includes the latching and retrieval hardware required to bring the inner-tube to the surface. When the inner-tube is full, a device called an overshot is lowered down the hole via a wireline cable and brought to the surface by use of a winch. Once the inner-tube assembly is at the surface, an empty inner-tube is lowered into the hole so drilling can resume.

Genuine Q™ Wireline System

The Boart Longyear engineering design team

continued to refine the initial wireline system, resulting in the launch of the patented Q™ wireline system in 1966. The original Q coring system has remained the most trusted technology in the business for over 50 years.

With the aim of providing customers a larger diameter core sample without increasing hole diameter, Boart Longyear introduced the Thin Kerf wireline system product line in 1989.

Link Latch™ Mechanism

In 1998, Boart Longyear once again secured its position as the leading innovator in wireline technology by introducing the patented Link Latch™ mechanism. This innovation virtually eliminated "stuck tubes" during wireline retraction by providing mechanical leverage, directly pivoting the latches into the retracted position, whereas conventional technology attempts to indirectly push the latches while fighting poor mechanical leverage and interference with the latch seat.

Quick Pump-In™ Head Assembly

In 2002 Boart Longyear adapted the Q system to address the needs of the underground market, announcing the patented Quick Pump-In™ head assembly. This head assembly added positive latch indication and removed the pump-in lip seal from the latch retracting case, eliminating latching concerns against in-ground fluid, gas pressure zones and fluid evacuation or suction.

Quick Descent™ Head Assembly

In 2008, Boart Longyear launched the patented Quick Descent™ core barrel head assembly. This new head assembly provided customers the potential to increase core barrel descent speeds up to 30%. The Quick Descent head assembly is a central component of the High Productivity Coring System which also includes the Stage™ diamond coring bit and the V-Wall™ coring rod.

CORE BARREL HISTORICAL TIMELINE

1950

1960

1970

1980

1958: Boart Longyear introduced the original wireline core retrieval system

1966: Improved, patented Q™ Wireline system launched

1989: Thin Kerf (QTK) added to the Q™ Wireline system

ROLLER LATCH™ TECHNOLOGY

Boart Longyear is proud to introduce the latest innovation in underground coring products – the Roller Latch™ Head Assembly. This revolutionary new patented design features bearing roller balls as a replacement for the traditional link latch mechanism, and offers greater pump-in speed, increased product life and most importantly: improved safety.

Safer Operations

The Roller Latch head assembly offers the first hold-back braking system in any underground wireline drilling system. The unique design utilizes the rollers to retain the inner tube assembly in the drill string. This feature protects drillers from dangerous incidents such as free-falling inner tubes or blow-back situations.

Drill Deeper with V-Wall™ Capability

The Quick Pump-In™ Roller Latch™ underground head assemblies are equipped with variable lip pump-in seals compatible with Boart Longyear's advanced V-Wall™ coring rods. For the first time ever, drillers are able to take advantage of significantly lighter V-Wall rods in underground applications, thus leading to deeper drilling capacity and reduced driller fatigue.

For more information about Quick Descent™ and Quick Pump-In™ Roller Latch™ Technology, see page 93.

1998: Patented Link Latch™ Wireline system introduced

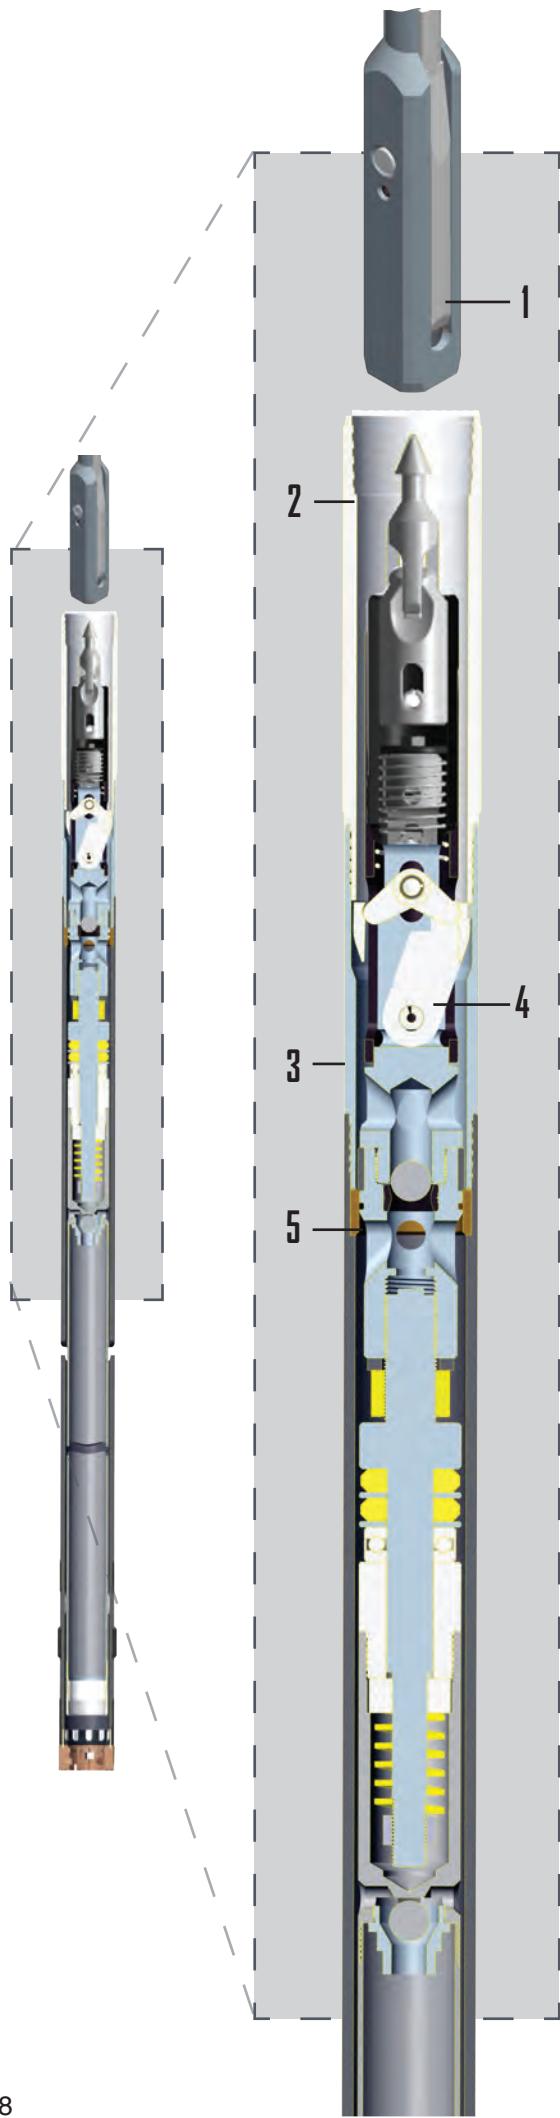

2000

2002: Patented Quick Pump-In™ Head Assembly launched

2010

2008: Patented Quick Descent™ Head Assembly launched

2011: Patented Roller Latch™ Head Assembly launched

CORE BARREL SYSTEM OVERVIEW

1: OVERTSHOT

The overshot is dropped or pumped into the drill string to retrieve the inner-tube assembly via wireline cable and hoist.

2: LOCKING COUPLING

The Locking Coupling connects the drill string to the outer-tube assembly and provides a mating surface which the head assembly latches ride against while drilling.

Additionally, locking couplings provide directional control for the core barrel assembly through wear resistant stabilizing pads that wear down against the drill hole wall.

3: ADAPTER COUPLING

Not Required for Roller Latch™ Assemblies

The adapter coupling mates between the locking coupling and core barrel outer-tube, providing the pocket into which the head assembly latches deploy.

4: HEAD ASSEMBLY

The head assembly provides latching and pivoting spearpoint mechanisms to allow insertion and retrieval of the inner-tube assembly, a bearing assembly to allow the inner-tube to remain stationary and avoid sample damage while drilling, fluid pressure operating indications and fluid control valves. All head assemblies incorporate a shut off valve assembly which provides a fluid pressure signal to the drill operator when the valve members are compressed, indicating a full or blocked inner-tube.

5: LANDING RING

The Landing Ring sits in the upper-end of the outer tube and is retained by the mating coupling. As the inner tube assembly trips into the drill string, the landing shoulder on the Head Assembly impacts the Landing Ring setting the inner tube assembly into drilling position.

6: OUTER-TUBE

The outer-tube houses the inner-tube assembly and connects to the diamond products cutting the hole. The increased wall thickness of the outer-tube provides additional rigidity for directional control and a tighter hole annulus for increased fluid velocity and rapid cuttings evacuation for bit performance. Multiple outer-tubes can be assembled to extend the possible core sample length.

7: INNER-TUBE

The inner-tube captures the core sample as drilling progresses. Multiple inner-tubes can be assembled with couplers or extensions to accept longer core samples.

8: INNER-TUBE STABILIZER

Seated in the reaming shell or in mated outer-tube extensions, the replaceable and reversible inner-tube stabilizer provides centralizing for improved sample recovery and a bearing between the stationary inner-tube and the rotating outer-tube.

9: CORE LIFTER CASE

The core lifter case mates to the inner-tube and houses the core lifter in a tapered socket which controls movement of the core lifter.

As the drill string is lifted during a core breaking operation, the core lifter case bottoms out on the inside of the drill bit transferring the pullback load from the drill string to the core lifter until the core sample breaks.

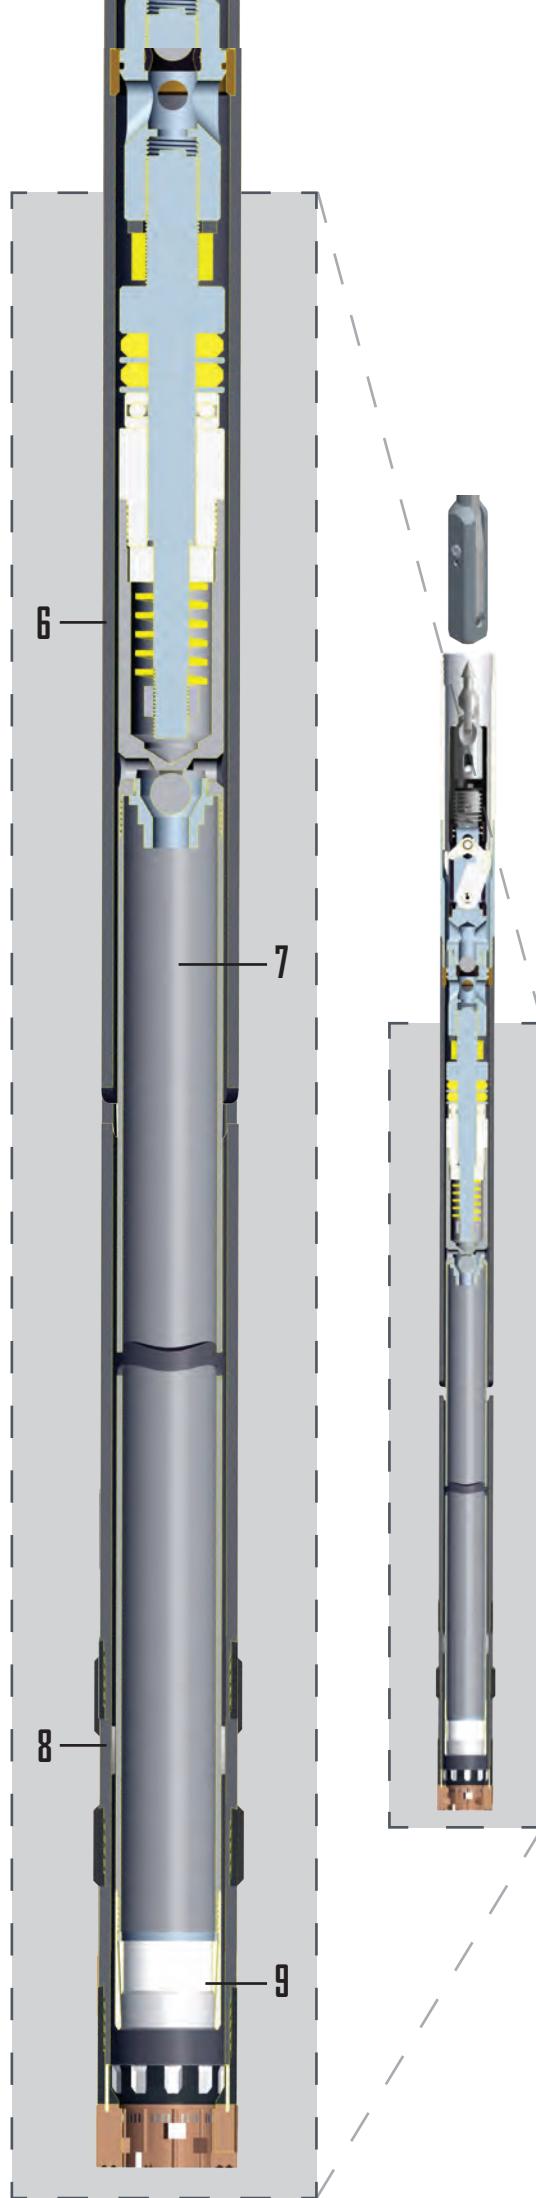

9: CORE LIFTER

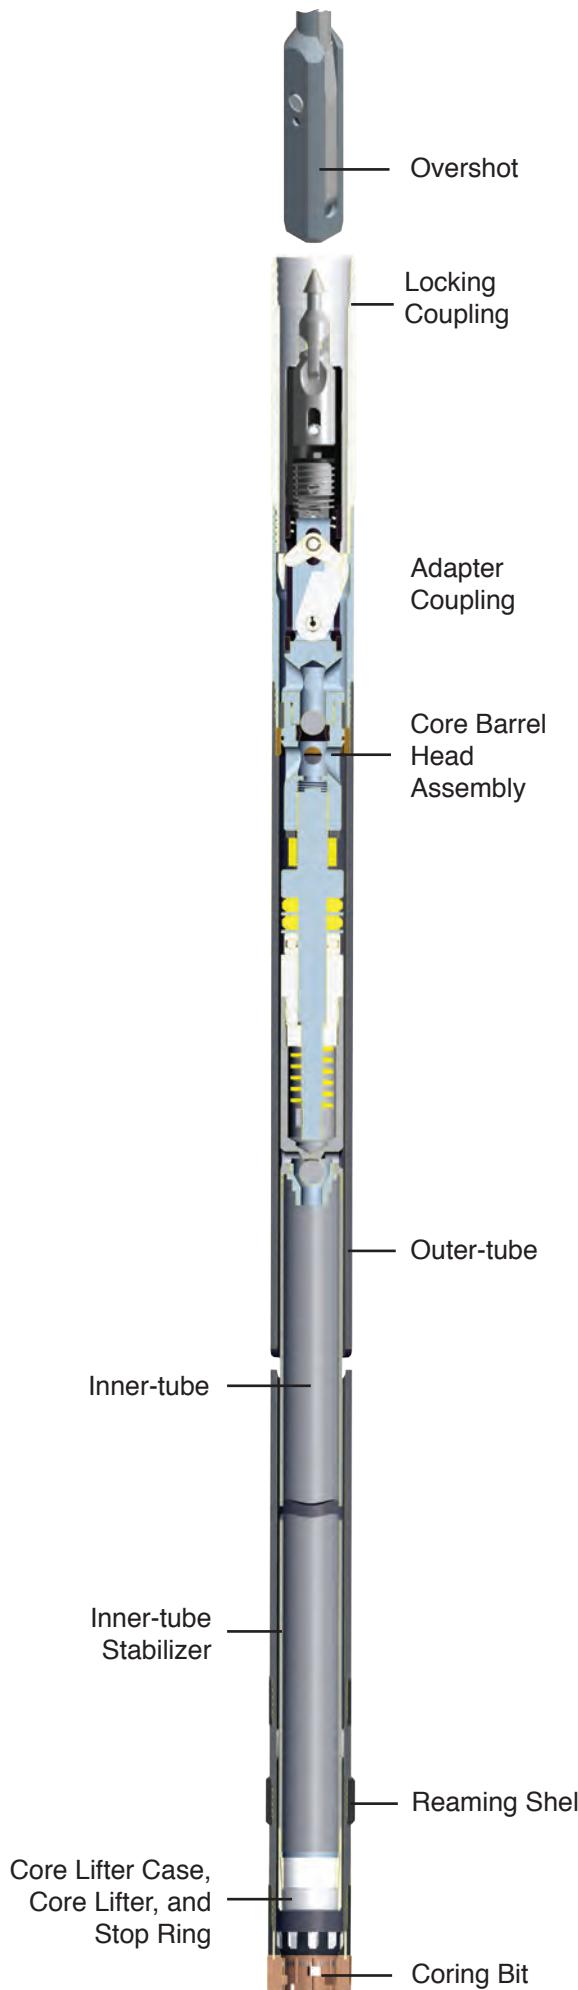

The core lifter is a hardened steel, split collar with a tapered body that mates to a tapered socket in the core lifter case.

In a core breaking operation, the drill string is lifted off bottom and the core sample begins to slide out of the inner-tube. Grip features on the inner surface of the core lifter catch the moving core sample and pull the core lifter towards the smaller end of the tapered socket in the core lifter case. The core lifter is constricted against the core sample and retains it after it has broken, allowing retrieval to surface.

9: STOP RING

The Stop Ring is a hardened steel snap ring designed to seat into a mating groove, and retain the core lifter in the core lifter case.

GENUINE Q™ WIRELINE SYSTEMS

Genuine Q™ wireline systems are ideal for use in most drilling conditions and are available for application in standard DCDMA hole sizes (A, B, N, H, P).

Boart Longyear currently offers four models of the wireline core barrel system:

Q™ / Q™ TK / Q™ 3 / Q™ TT

Q™ / Q™ TK*

Q / QTK wireline systems (pictured left) consist of the core barrel assembly and the overshot assembly. Both assemblies are integral to the wireline system.

The core barrel assembly is composed of the inner-tube group and outer-tube group.

The inner-tube group is composed of:

- Head assembly
- Inner-tube
- Core lifter case
- Core lifter
- Stop ring

The inner-tube group collects the core sample during the drilling process and is independent of the outer-tube group.

The outer-tube group is composed of the remainder of the core barrel components:

- Locking coupling
- Adapter coupling
- Outer-tube

The outer-tube group always remains at the bottom of the hole and houses the inner-tube group during the drilling process.

QTK* systems are optimized to allow for a larger core sample while retaining the same hole, low fluid pressure, and robust inner- and outer-tubes. QTK systems are offered in the A, B and N sizes.

*NQTK also known as NQ2

Q™3

Q3 wireline systems consist of the same groups as the Q and QTK but utilize a third tube called an inner-tube liner or split tube. The liner is placed inside the inner-tube.

Q3 systems enable integral core recovery when drilling coal, clay bearing or highly fractured formations. The liner, or split tube, retains the core sample in its received state for easier loading into sample trays or for storage and subsequent presentation to the geologist. The Q3 system is only available in surface configurations and is available in N, H and P sizes.

Q™TT

The QTT system is similar to the Q3 system but includes a specialized core lifer case and bit. These components enable change in the water flow by creating a seal which routes water flow away from the inner-tube – further improving core recovery.

Copyright © 2016 Boart Longyear. All rights reserved. Q is a trademark of Boart Longyear.

HIGH PRODUCTIVITY CORING SYSTEM

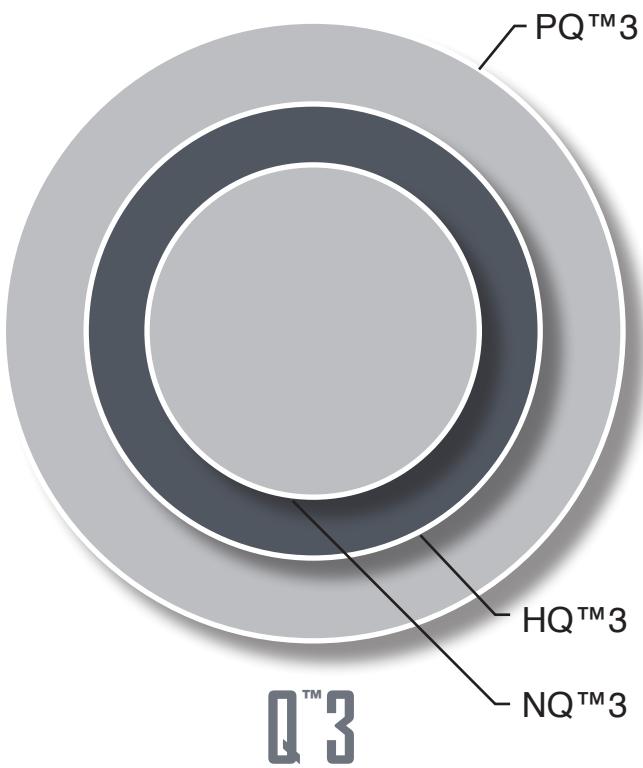

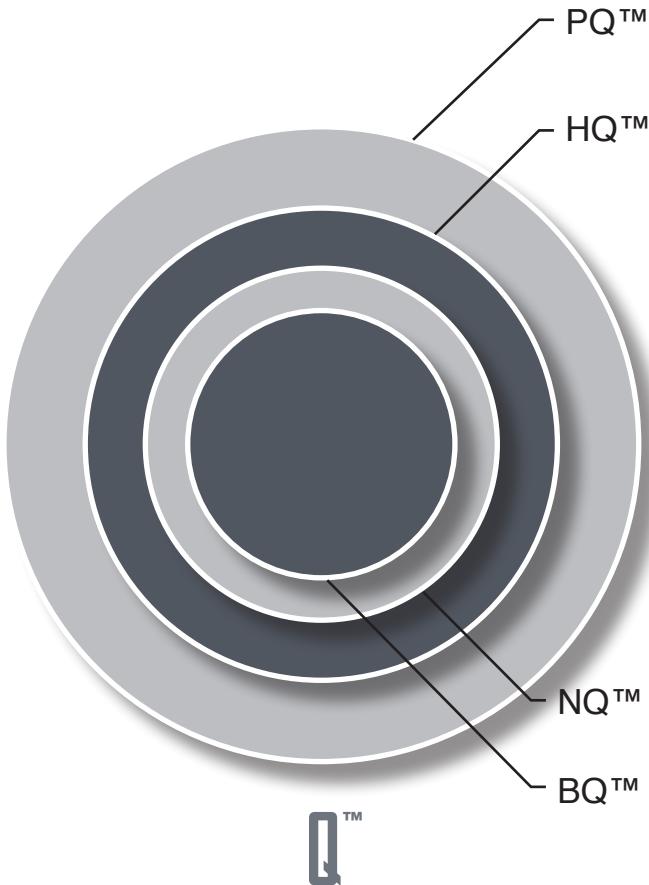

The High Productivity Coring System is a time-saving surface coring system which includes:

- **Quick Descent™ head assembly**
- **V-Wall™ coring rods**
- **Stage™3 diamond coring bit**

Each system component increases core recovery and productivity, delivering greater efficiencies to the driller. When all three products are used together, the High Productivity Coring System provides increased bit life by up to 145 percent and core barrel tripping speed by up to 50 percent over most coring systems.

DIAMETER OFFERINGS (ACTUAL CORE SIZE)

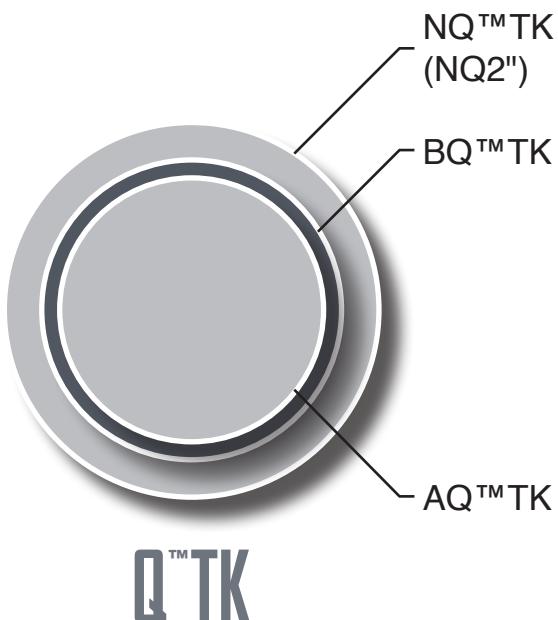

Q™ WIRELINE*

Q (Standard)				
SIZE	CORE DIAMETER		HOLE DIAMETER	
	Metric (mm)	U.S. (in)	Metric (mm)	U.S. (in)
BQ	36.4	1-7/16	60.0	2-23/64
NQ	47.6	1-7/8	75.7	2-63/64
HQ	63.5	2-1/2	96.0	3-25/32
PQ	85.0	3-11/32	122.6	4-53/64
QTK (Thin Kerf)				
AQTK	30.5	1-13/64	48.0	1-57/64
BQTK	40.7	1-39/64	60.0	2-23/64
NQTK**	50.6	2	75.7	2-63/64
Q3 (Triple Tube)				
NQ3	45.0	1-25/32	75.7	2-63/64
HQ3	61.1	2-13/32	96.0	3-25/32
PQ3	83.0	3-9/32	122.6	4-53/64

*Compared to most core drilling systems, Q™ systems provide maximum performance, balancing drilling fluid and cuttings management with reliable inner and outer-tubes.

The Boart Longyear nomenclature and hole sizes are based on the globally accepted Diamond Core Drilling Manufacturers Association (DCDMA) "W" series. Also note that the DCDMA specifications were adopted into ISO3551 (1992) and British Standard BS4019 (1993) Rotary Drilling Equipment.

**NQTK also known as NQ2

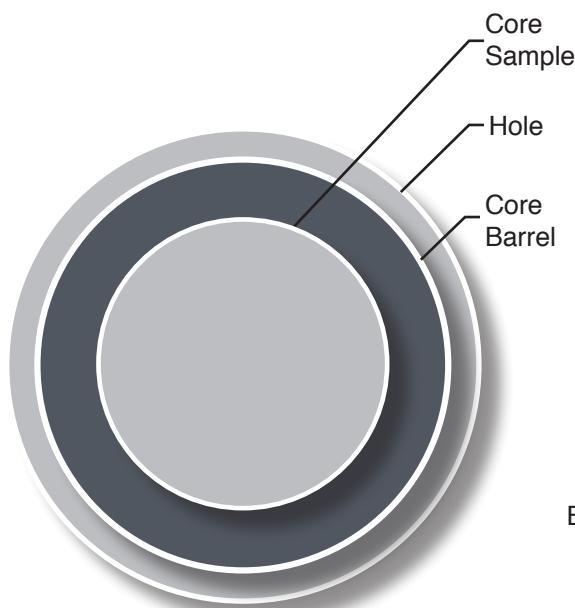

CORE BARREL CONFIGURATIONS, FEATURES AND OPTIONS

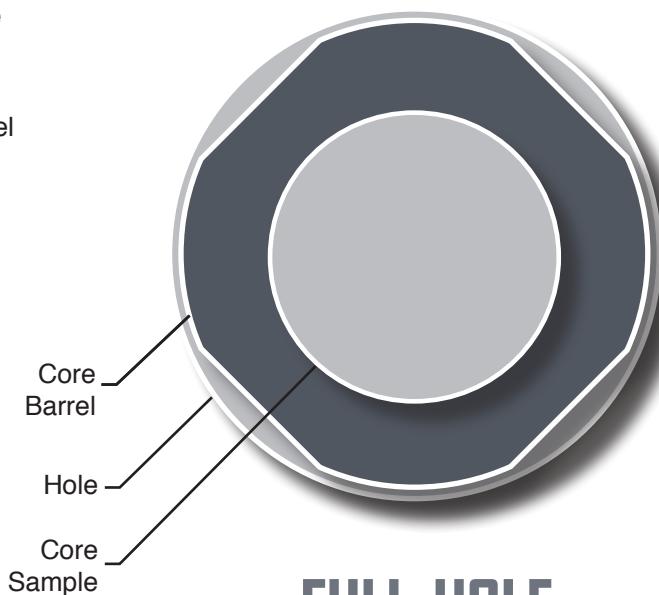

Standard

Boart Longyear™ core barrel kits and inner-tube groups are available in A, B, N, H and P, as well as two standard lengths of 1.5 M / 5.0 FT and 3.0 M / 10.0 FT. These lengths refer to the inner-tube length which dictates the maximum amount of core that can be retrieved in one drilling run before the inner-tube must be retrieved.

Note that optional couplings and adapters are available, for Q™ and QTK systems, to extend the core barrel in 1.5 M / 5.0 FT or 3.0 M / 10.0 FT multiples. Also, optional inner-tube couplings and extensions are available to allow for extended length reaming shells.

STANDARD
TOP VIEW

FULL-HOLE
TOP VIEW

Full-hole

Full-hole systems are designed for operation in competent ground formations where hole accuracy is top priority. The oversized outer diameter and four-flat design keeps the core barrel system tight to the hole while allowing adequate cutting flow. This system is comprised of standard core barrel components, the full-hole induction-hardened locking coupling and the full-hole chrome-plated outer-tube. When ordering a core barrel kit, these two optional full-hole items must be selected.

Boart Longyear A, B, N, and H size core barrel systems can be configured as full-hole wireline coring systems. This system is comprised of standard core barrel components, the full-hole locking coupling and outer-tube. When ordering a core barrel kit, these two optional full hole items must be selected.

CORE BARREL CONFIGURATIONS, FEATURES AND OPTIONS

Configuration Overview

Within the Core Barrel Assemblies section of this catalog, both core barrel assemblies and inner-tube groups are referenced. Both assemblies are independently configurable and include a distinct set of components as outlined below.

Core Barrel Kits

The Core Barrel Kits include all components required to complete a full core barrel and utilize it within a rod string:

- Head assembly
- Inner-tube
- Stop ring
- Core lifter
- Core lifter case
- Locking coupling
- Adapter coupling
- Landing ring
- Outer-tube
- Inner-tube stabilizer
- Thread protector (optional)
- In-hole tool product manual
- Safety poster
- Link Latch only

Inner-Tube Groups

The Inner-tube groups provide the necessary components to collect a core sample from head assembly to core lifter:

- Head Assembly
- Inner-tube
- Stop Ring
- Core Lifter
- Core Lifter Case
- In-hole Tool Product Manual
- Safety Poster

CONFIGURATION WALK-THROUGH

Boart Longyear offers a variety of core barrel systems to meet the different drilling conditions in the field. Customers have the ability to tailor the core barrel kit to best suit their needs.

On the following page is an example of our core barrel assembly configurator which includes the inner-tube group. The components within the core barrel kit and inner-tube groups can be separated into three types of components:

Standard Component

These components are standard for a specific application within the core barrel kit or inner-tube group.

User Configured (Choose One)

These are required components within the core barrel kit; however, users must select a specific component to be included in the core barrel kit or inner-tube group.

Optional Component

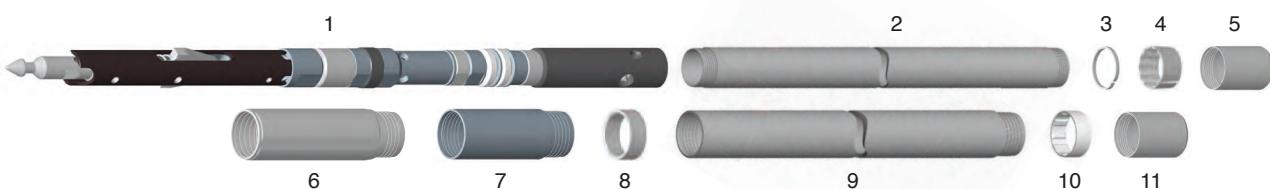

These are components that are fully optional to the customer. The core barrel kit or inner-tube group can be ordered without these components.

EXTENDED CORE BARRELS – AQ™ TK

The inner-tube coupling and lower inner-tube can be used to extend core barrels from 1.5 M / 5.0 FT to 4.5 M / 15.0 FT, or 3.0 M / 10.0 FT to 6.0 M / 20.0 FT lengths in consolidated ground conditions.

1	61129	Inner-tube Coupling
2	62200	Inner-tube Extenda, 1.5 M / 5.0 FT

Example A: To assemble a 6.0 M / 20 FT core barrel, use a 3.0 M / 10.0 FT core barrel plus the following:

- 1 outer-tube 3.0 M / 10.0 FT
- 1 inner-tube 3.0 M / 10.0 FT
- 1 inner-tube stabilizer
- 1 inner-tube coupling

* Inner-tube extensions for use when utilizing extended reaming shells can be found on page 169.

Inner-tube extendas can also be used to extend core barrels.

Example B: To extend in 1.5 M / 5.0 FT lengths:

- 1 outer-tube 1.5 M / 5.0 FT
- 1 inner-tube stabilizer
- 1 inner-tube extenda 1.5 M / 5.0 FT

EXTENDED CORE BARRELS – AQ™ TKU

The inner-tube coupling and lower inner-tube can be used to extend core barrels from 1.5 M / 5.0 FT to 4.5 M / 15.0 FT, or 3.0 M / 10.0 FT to 6.0 M / 20.0 FT lengths in consolidated ground conditions.

1	61129	Inner-tube Coupling
2	62200	Inner-tube Extenda, 1.5 M / 5.0 FT

Example A: To assemble a 6.0 M / 20.0 FT core barrel, use a 3.0 M / 10.0 FT core barrel plus the following:

- 1 outer-tube 3.0 M / 10.0 FT
- 1 inner-tube 3.0 M / 10.0 FT
- 1 inner-tube stabilizer
- 1 inner-tube coupling

* Inner-tube extensions for use when utilizing extended reaming shells can be found on page 169.

Inner-tube extendas can also be used to extend core barrels.

Example B: To extend in 1.5 M / 5.0 FT lengths:

- 1 outer-tube 1.5 M / 5.0 FT
- 1 inner-tube stabilizer
- 1 inner-tube extenda 1.5 / 5.0 FT

⚠ WARNING

Keep hands and body clear of open rods while operating. Failure to do so could result in serious injury or death.

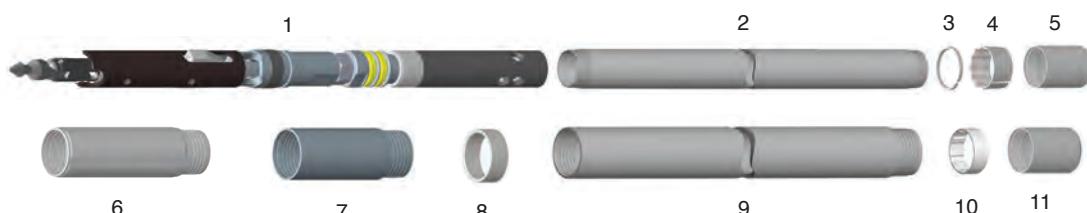

Warning: While it improves safety, the hold-back brake feature is not intended as a fail-safe device. Keep hands and body clear of open rods at all times. When in use, always apply fluid pressure to compensate for any wireline retraction resistance from the core barrel. Failure to do so may result in product failure or injury.

EXTENDED CORE BARRELS – BQ™ U

The inner-tube coupling and lower inner-tube can be used to extend core barrels from 1.5 M / 5.0 FT to 4.5 M / 15.0 FT, or 3.0 M / 10.0 FT to 6.0 M / 20.0 FT lengths in consolidated ground conditions.

1	31402	Inner-tube Coupling, BQ
2	64384	Inner-tube Extenda, 1.5 M / 5.0 FT, BQ

Example: To assemble a 6.0 M / 20.0 FT core barrel, use a 3.0 M / 10.0 FT core barrel plus the following:

- 1 outer-tube 3.0 M / 10.0 FT
- 1 inner-tube stabilizer
- 1 inner-tube 3.0 M / 10.0 FT
- 1 inner-tube coupling

* Inner-tube extensions for use when utilizing extended reaming shells can be found on page 169.

Inner-tube extendas can also be used to extend core barrels.

Example: To extend in 1.5 M / 5.0 FT lengths:

- 1 outer-tube 1.5 M / 5.0 FT
- 1 inner-tube stabilizer
- 1 inner-tube extenda 1.5 M / 5.0 FT

⚠ WARNING

Keep hands and body clear of open rods while operating. Failure to do so could result in serious injury or death.

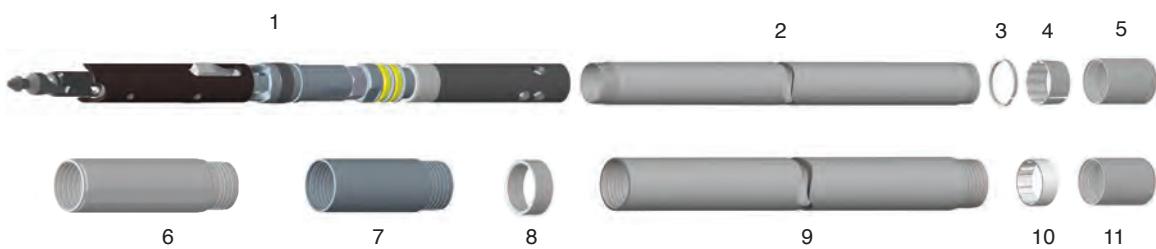

Warning: While it improves safety, the hold-back brake feature is not intended as a fail-safe device. Keep hands and body clear of open rods at all times. When in use, always apply fluid pressure to compensate for any wireline retraction resistance from the core barrel. Failure to do so may result in product failure or injury.

⚠ WARNING

Keep hands and body clear of open rods while operating. Failure to do so could result in serious injury or death.

Warning: While it improves safety, the hold-back brake feature is not intended as a fail-safe device. Keep hands and body clear of open rods at all times. When in use, always apply fluid pressure to compensate for any wireline retraction resistance from the core barrel. Failure to do so may result in product failure or injury.

EXTENDED CORE BARRELS – NQ™

The inner-tube coupling and lower inner-tube can be used to extend core barrels from 1.5 M / 5.0 FT to 4.5 M / 15.0 FT, or 3.0 M / 10.0 FT to 6.0 M / 20.0 FT lengths in consolidated ground conditions.

1	31403	Inner-tube Coupling
2	5006703	Inner-tube Extenda, 1.5 M / 5 FT

Example: To assemble a 6.0 M / 20.0 FT core barrel, use a 3.0 M / 10.0 FT core barrel plus the following:

- 1 outer-tube 3.0 M / 10.0 FT
- 1 inner-tube stabilizer
- 1 inner-tube 3.0 M / 10.0 FT
- 1 inner-tube coupling

* Inner-tube extensions for use when utilizing extended reaming shells can be found on page 169.

Inner-tube extendas can also be used to extend core barrels.

Example: To extend in 1.5 M / 5.0 FT lengths:

- 1 outer-tube 1.5 M / 5.0 FT
- 1 inner-tube stabilizer
- 1 inner-tube extenda 1.5 M / 5.0 FT

⚠ WARNING

Keep hands and body clear of open rods while operating. Failure to do so could result in serious injury or death.

Warning: While it improves safety, the hold-back brake feature is not intended as a fail-safe device. Keep hands and body clear of open rods at all times. When in use, always apply fluid pressure to compensate for any wireline retraction resistance from the core barrel. Failure to do so may result in product failure or injury.

EXTENDED CORE BARRELS – NQ™ TK*

1	101999	Inner-tube Coupling, NQTK*
2	63033	Lower Inner-tube, 3.0 M / 10.0 FT, NQTK*
3	104884	Inner-tube Extenda, 1.5 M / 5.0 FT, NQTK*
	102023	Inner-tube Extenda, 3.0 M / 10.0 FT, NQTK*

The inner-tube coupling and lower inner-tube can be used to extend core barrels from 1.5 M / 5.0 FT to 4.5 M / 15.0 FT, or 3.0 M / 10.0 FT to 6.0 M / 20.0 FT lengths in consolidated ground conditions.

Example A: To assemble a 6.0 M / 20.0 FT core barrel, use a 3.0 M / 10.0 FT core barrel plus the following:

- 1 outer-tube 3.0 M / 10.0 FT
- 1 lower inner-tube 3.0 M / 10.0 FT
- 1 inner-tube stabilizer
- 1 inner-tube coupling

Inner-tube extendas can also be used to extend core barrels.

Example B: To extend in 1.5 M / 5.0 FT lengths:

- 1 outer-tube 1.5 M / 5.0 FT
- 1 inner-tube stabilizer
- 1 inner-tube extenda 1.5 M / 5.0 FT

Example C: To extend in 3.0 M / 10.0 FT lengths:

- 1 outer-tube 3.0 M / 10.0 FT
- 1 inner-tube stabilizer
- 1 inner-tube extenda 3.0 M / 10.0 FT

* Inner-tube extensions for use when utilizing extended reaming shells can be found on page 169.

⚠ WARNING

Keep hands and body clear of open rods while operating. Failure to do so could result in serious injury or death.

Warning: While it improves safety, the hold-back brake feature is not intended as a fail-safe device. Keep hands and body clear of open rods at all times. When in use, always apply fluid pressure to compensate for any wireline retraction resistance from the core barrel. Failure to do so may result in product failure or injury.

EXTENDED CORE BARRELS – HQ™

The inner-tube coupling and lower inner-tube can be used to extend core barrels from 1.5 M / 5.0 FT to 4.5 M / 15.0 FT, or 3.0 M / 10.0 FT to 6.0 M / 20.0 FT lengths in consolidated ground conditions.

1	31404	Inner-tube Coupling
----------	-------	---------------------

Example: To assemble a 6.0 M / 20.0 FT core barrel, use a 3.0 M / 10 FT core barrel plus the following:

- 1 outer-tube 3.0 M / 10.0 FT
- 1 inner-tube stabilizer
- 1 inner-tube 3.0 M / 10.0 FT
- 1 inner-tube coupling

* Inner-tube extensions for use when utilizing extended reaming shells can be found on page 169.

Roller Latch Warning: Roller Latch locking couplings are required to use Roller Latch head assemblies. Adapter couplings are **not** compatible with Roller Latch head assemblies. Roller Latch locking couplings are **not** compatible with Link Latch™ head assemblies.

LEGEND: Standard Component Required - Choose One [OPT] Optional Component Not a Kit Item

EXTENDED CORE BARRELS – HQ™

The inner-tube coupling and lower inner-tube can be used to extend core barrels from 1.5 M / 5.0 FT to 4.5 M / 15.0 FT, or 3.0 M / 10.0 FT to 6.0 M / 20.0 FT lengths in consolidated ground conditions.

1	31404	Inner-tube Coupling
----------	-------	---------------------

Example: To assemble a 6.0 M / 20.0 FT core barrel, use a 3.0 M / 10 FT core barrel plus the following:

- 1 outer-tube 3.0 M / 10.0 FT
- 1 inner-tube stabilizer
- 1 inner-tube 3.0 M / 10.0 FT
- 1 inner-tube coupling

* Inner-tube extensions for use when utilizing extended reaming shells can be found on page 169.

⚠ WARNING

Keep hands and body clear of open rods while operating. Failure to do so could result in serious injury or death.

Warning: While it improves safety, the hold-back brake feature is not intended as a fail-safe device. Keep hands and body clear of open rods at all times. When in use, always apply fluid pressure to compensate for any wireline retraction resistance from the core barrel. Failure to do so may result in product failure or injury.

EXTENDED CORE BARRELS – PQ™

The inner-tube coupling and lower inner-tube can be used to extend core barrels from 1.5 M / 5.0 FT to 4.5 M / 15.0 FT, or 3.0 M / 10.0 FT to 6.0 M / 20.0 FT lengths in consolidated ground conditions.

1	5000854	Extenda, PQ Inner-tube 3.0 M / 10.0 FT
2	5000617	Stabilizer, PQ Extended
3	5000855	Extenda, PQ Outer-tube, 3.0 M / 10.0 FT

Example: To assemble a 6.0 M / 20.0 FT core barrel, use a 3.0 M / 10.0 FT core barrel plus the following:

- 1 Extenda outer-tube 3.0 M / 10.0 FT
- 1 Inner-tube stabilizer
- 1 Extenda inner-tube 3.0M / 10.0 FT

* Inner-tube extensions for use when utilizing extended reaming shells can be found on page 169.

Roller Latch Warning: Roller Latch locking couplings are required to use Roller Latch head assemblies. Adapter couplings are **not** compatible with Roller Latch head assemblies. Roller Latch locking couplings are **not** compatible with Link Latch™ head assemblies.

LEGEND: Standard Component Required - Choose One [OPT] Optional Component Not a Kit Item

EXTENDED CORE BARRELS – PQ™

The inner-tube coupling and lower inner-tube can be used to extend core barrels from 1.5 M / 5.0 FT to 4.5 M / 15.0 FT, or 3.0 M / 10.0 FT to 6.0 M / 20.0 FT lengths in consolidated ground conditions.

1	5000854	Extenda, PQ Inner-tube 3.0 M / 10.0 FT
2	5000617	Stabilizer, PQ Extended
3	5000855	Extenda, PQ Outer-tube, 3.0 M / 10.0 FT

Example: To assemble a 6.0 M / 20.0 FT core barrel, use a 3.0 M / 10.0 FT core barrel plus the following:

- 1 Extenda outer-tube 3.0 M / 10.0 FT
- 1 Inner-tube stabilizer
- 1 Extenda inner-tube 3.0M / 10.0 FT

* Inner-tube extensions for use when utilizing extended reaming shells can be found on page 169.

QUICK DESCENT™ ROLLER LATCH™ HEAD ASSEMBLY

The revolutionary new Quick Descent™ Roller Latch™ Head Assembly combines the improved reliability of Roller Latch technology with the increased productivity of Quick Descent technology along with additional new features.

Roller Latch™ Technology

Ultra-reliable Roller technology eliminates the low strength, play, and jamming associated with traditional 'swing-out' latch mechanisms. Roller latches detent into retracted position to eliminate latch drag for increased tripping speed, particularly in V-Wall™ Rods. Roller latches overcome the detent upon landing, or alternatively can be positively driven to deployed position with fluid pressure, or with drill rotation centrifugal force. Under drilling rotation, roller latches self-lock into the locking coupling integrated latch seat to drive the head assembly, eliminating adapter couplings and locking coupling tangs.

Latch Indication

A redesigned fluid control valve provides a positive latch indication signal, and also provides patented 'Dry Hole Valve' functionality for lost circulation conditions in deep holes, when used with optional 'Fluid Retention' valve springs and bushings.

Quick Descent Technology

The patented design includes a tapered profile with axial grooving, a hollow spindle, and a latch body integrated check valve, optimized for fluid flow directly from the inner tube through the head assembly, offering dramatically reduced fluid drag for increased tripping speed and productivity. Up to 50% faster tripping when combined with enlarged V-Wall rod midbodies.

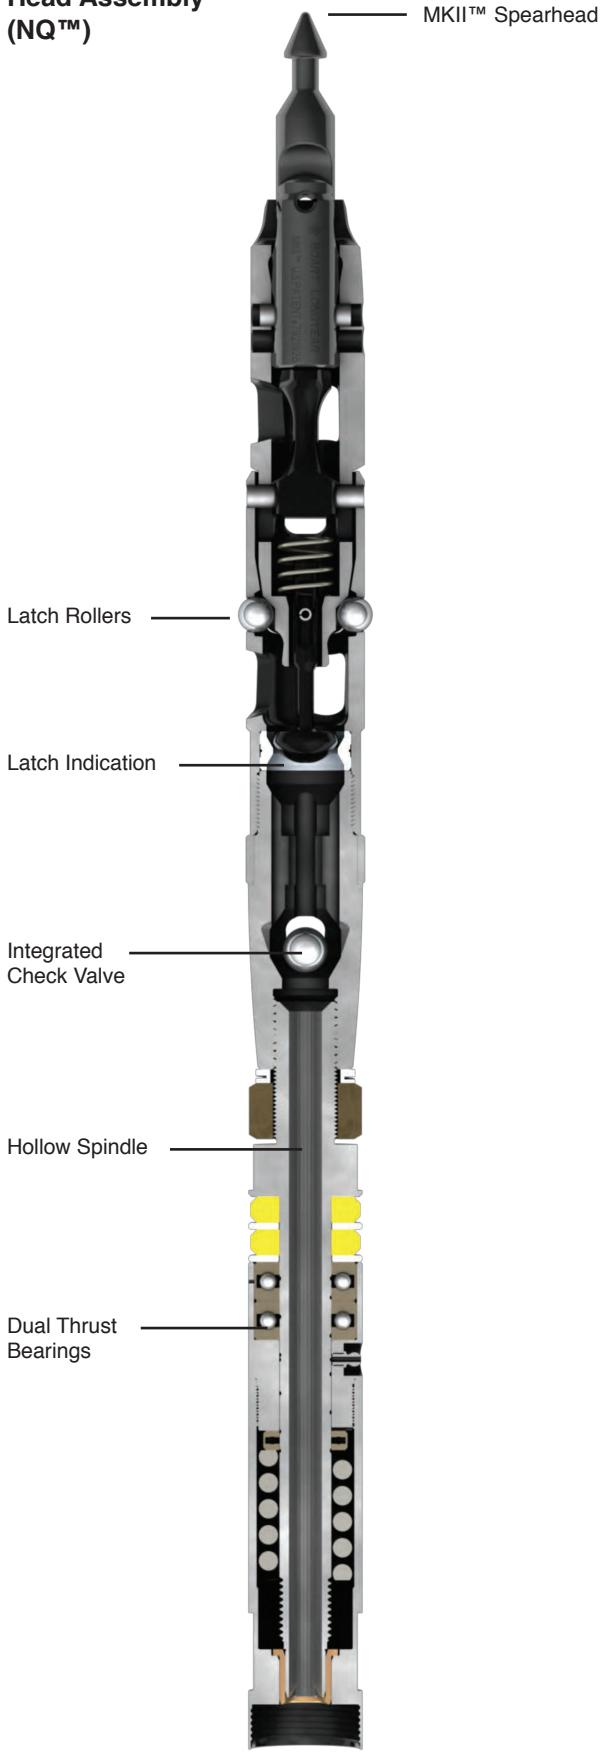

Double Thrust Bearings

A new spindle bushing provides direct lubrication and full enclosure of double thrust bearings, for increased load capacity and maximum bearing life at high rpm, ensuring reliable performance when pushing through difficult drilling conditions.

Safer Operations

The MKII™ Spearhead assembly provides increased safety, featuring 170% strength, a self-lubricating nylon plunger to reduce wear, a self-centering spearpoint with multiple detent positions, and an innovative design to eliminate pinch points. A new heavy duty spring provides a 30% increase in detent positioning strength and is treated for consistent, extended performance.

Quick Descent™ Roller Latch™ Head Assembly (NQ™)

QUICK PUMP-IN™ ROLLER LATCH™ HEAD ASSEMBLY

The revolutionary new patented Roller Latch™ Head Assembly features rolling latches as a replacement for the traditional link latch mechanism. It offers greater pump-in speed, improved safety and increased productivity.

Safer Operations

The Roller Latch head assembly offers the first hold-back braking system employed in any core retrieval system. The unique design utilizes large rollers that are continually engaged, halting any expulsion of the assembly. Only when the wireline is taut during retrieval operations will the Roller Latch's rollers retract, allowing for a controlled descent. During the event of a blow-back or free-fall situation, the rollers automatically engage and immediately stop the head assembly, thus protecting your drillers from a hazardous falling inner-tube. This head assembly also incorporates Boart Longyear's new MKII™ Spearhead for added strength and safety during retrieval.

Quicker Pump-in

The Roller Latch underground head assembly is optimized for fluid flow and utilizes corrosion and wear resistant components to ensure smooth and reliable functionality. The new Roller Latch locking coupling connects the drill string directly to the outer-tube and the latch rollers lock the head assembly with the rotating rod string. These features eliminate the need for any adapter couplings, drive key, or tang.

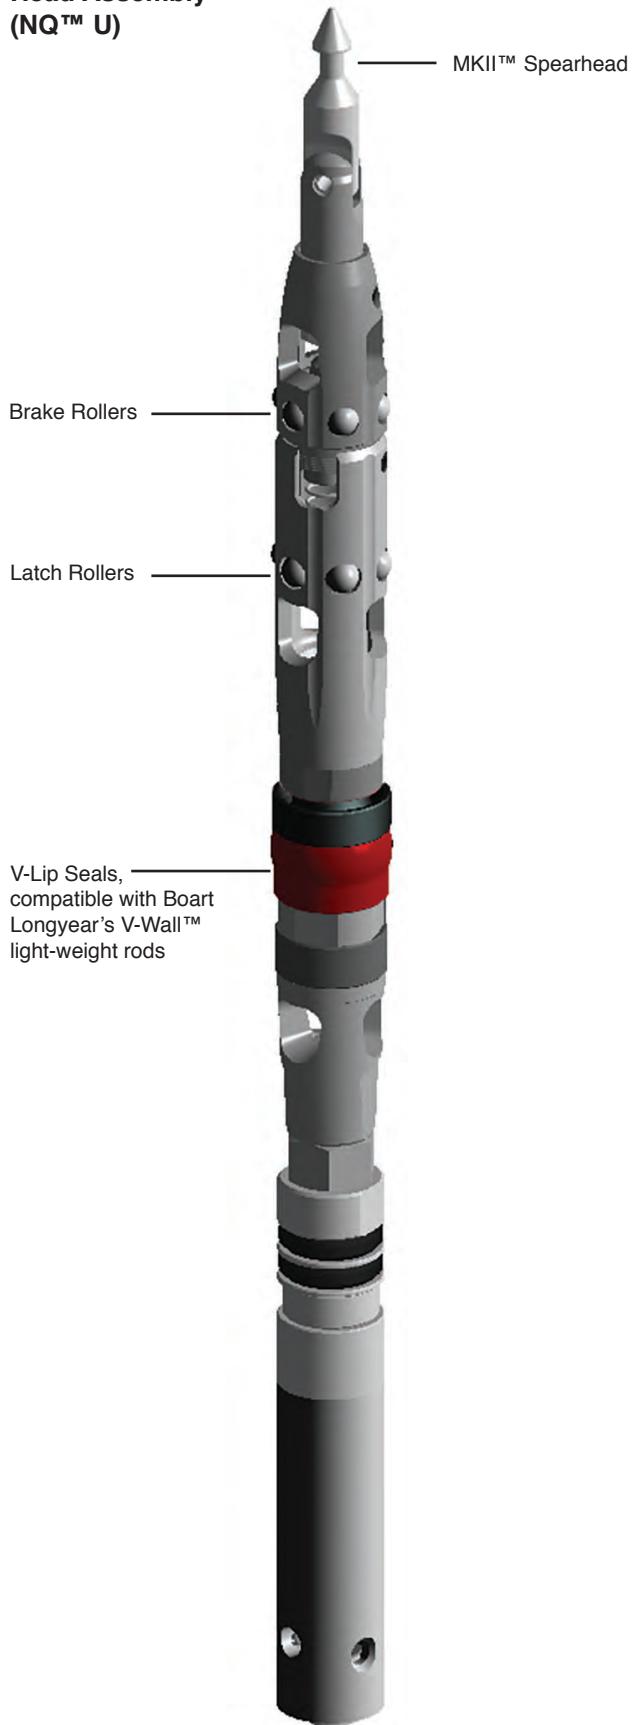

Drill Deeper with V-Wall™ Capability

The new Roller Latch Underground head assembly is equipped with variable lip pump-in seals which are compatible with Boart Longyear's advanced V-Wall™ coring rods. For the first time, underground drillers are able to take advantage of significantly lighter V-Wall rods, leading to deeper drilling capacity and reduced driller fatigue during rod handling.

Increased Productivity

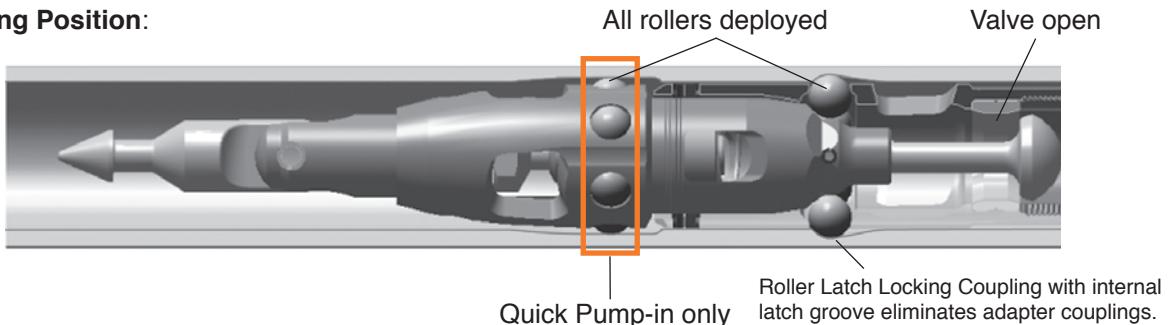

The wear-life of the latch rollers is superior to conventional latches because the rolling action eliminates drag. The Roller Latch deploys and retracts radially, without swinging out like conventional pivoting latch mechanisms. Excessive wear due to a loose-fit or slippage is eliminated as the rollers simply drop back into position upon wireline retraction.

Quick Pump-In™ Roller Latch™ Head Assembly (NQ™ U)

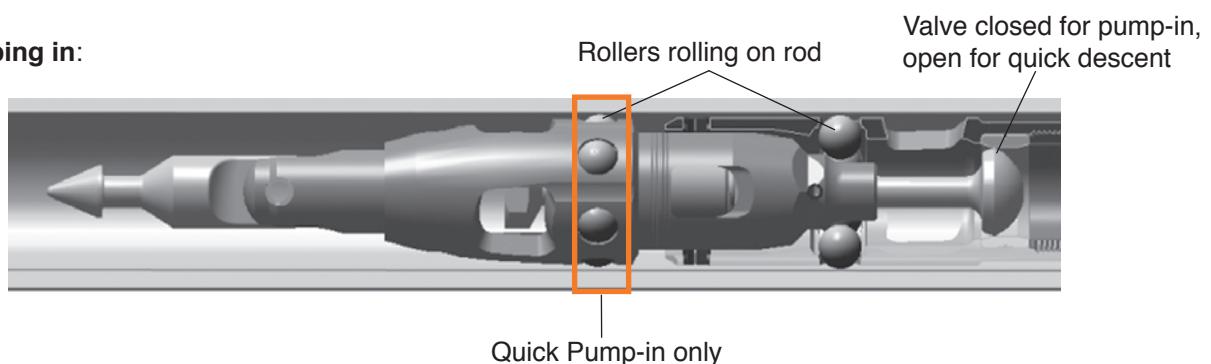

ROLLER LATCH™ LATCH POSITIONS

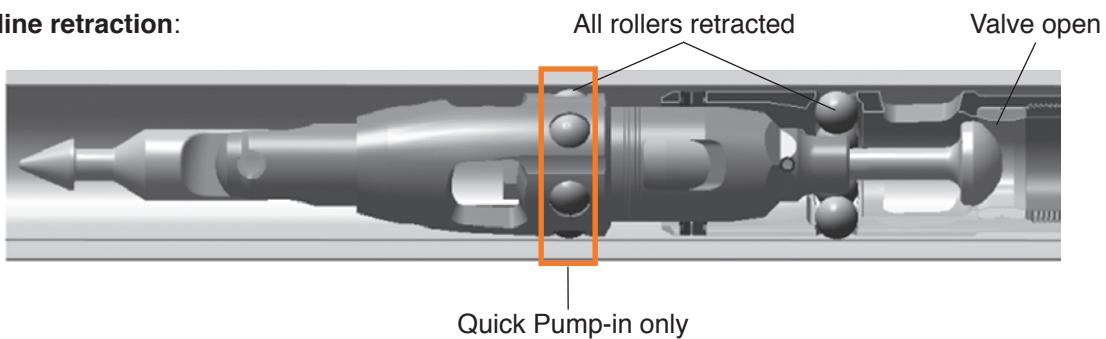

Drilling Position:

Tripping in:

Wireline retraction:

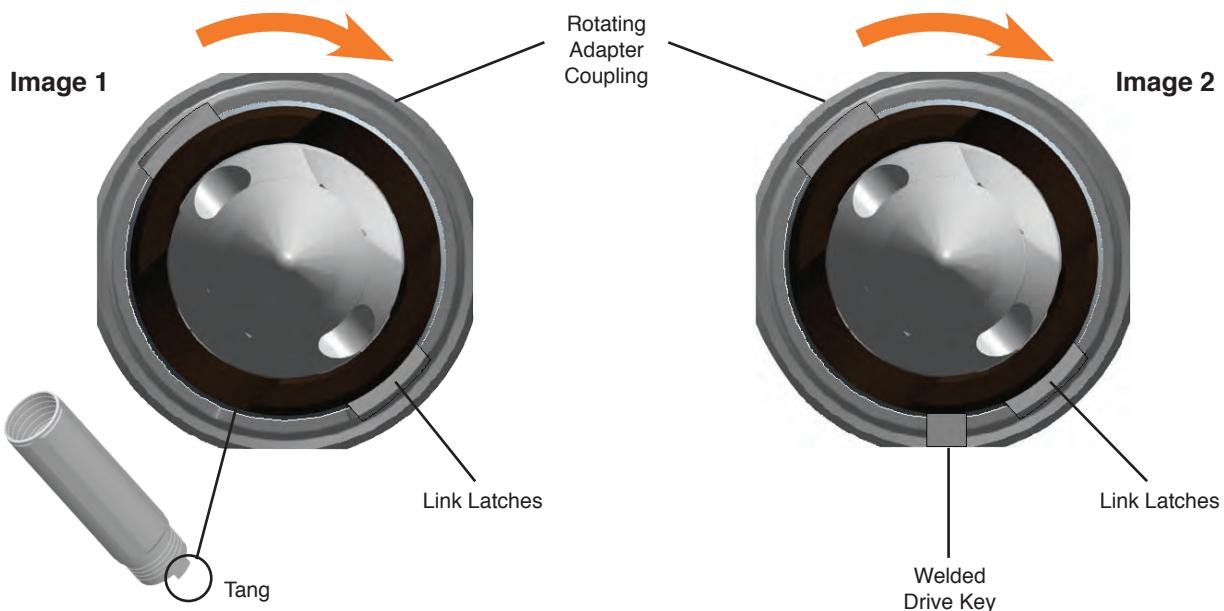

Roller Latch™ technology employs rollers that directly retract or deploy without requiring axial clearance or movement of the head. This eliminates jamming as experienced in traditional link latch mechanisms when the core barrel is over-filled. In traditional pivoting latch systems, axial clearance and axial movement is required of the head during wireline retraction. This is no longer required with the Roller Latch system.

WARNING: Inclined, up-hole drilling always presents a risk that wireline tools or other in-hole components may fall back towards the operator at high speed, under gravity or in-hole fluid or gas pressure. Operators must always be sure to stand clear of rod string openings to prevent serious injury or death. The hold-back brake feature is designed to improve the safety of up-hole drilling operations. However, it is not designed nor intended to be used as a fail-safe device. Failure of the hold-back brake can potentially occur due to factors such as improper maintenance or wireline overload.

LINK LATCH™ LOCKING MECHANISM

Before Roller Latch™ technology, mechanical elements commonly known as ‘tangs’ (image 1) or ‘drive keys’ (Image 2) were employed to drive the head assembly with the rod string.

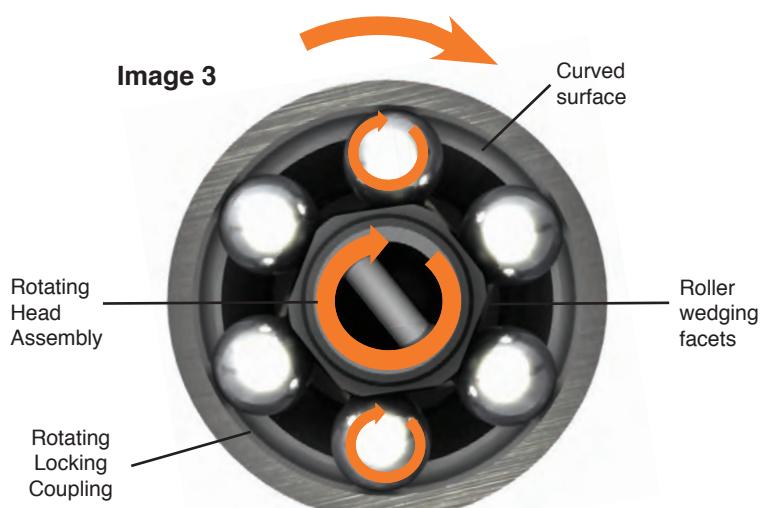

These elements eliminated the movement and wear between the latches and the locking coupling; and between the landing shoulder and outer tube landing ring.

ROLLER LATCH™ LOCKING MECHANISM

Roller Latch technology (image 3) includes a self-locking feature wherein the latches are driven rotationally by the rod string. This ensures the head assembly rotates with the rod string minimizing wear of rollers, landing shoulders, and outer-tube landing rings.

Given rotational movement in either direction, each latch roller is pinched as it wedges in between the faceted retracting case and curved inner surface of the locking coupling. The wedged rollers drive the head assembly in rotation with the drill string, eliminating locking coupling drive keys and tangs.

QUICK PUMP-IN™ ROLLER LATCH™ HOLD-BACK BRAKE

As a safety feature, the Roller Latch™ hold-back brake is always engaged by default. As the head moves outward by gravity, or in-hole pressure, the spring driven retracting case deploys the braking rollers which become wedged as they roll with the passing rod wall. This braking action prevents outward movement of the inner-tube.

When unlatching from the drilling position in inclined up-holes (image 1), apply fluid pressure to allow wireline retraction (image 2) of the hold-back brake. Similarly, when retracting in inclined holes where the inner-tube falls faster than wireline retraction, apply fluid pressure to maintain wireline tension and prevent brake application. Upon successful retrieval, grip the overshot and apply a quick manual push-and-pull action to simultaneously remove weight, retract the brake, and unload the inner tube.

Warning: Excessive wireline retraction force without simultaneous fluid pressure may cause hold-back brake engagement resulting in overload or fatigue failure.

If water pressure is not available to unload the brake in inclined holes (e.g. when starting a hole without wireline, or if the head assembly is beyond reach), then retract the rod string until a joint can be broken above the brake. The rod or coupling housing the head assembly can then be used as a handle to manage the inner tube. The brake will remain engaged until the inner tube is held at a declined angle and weight unloads the brake, allowing manual retrieval by pulling on the spearhead.

Braking Action

Image 2- Wireline Retraction

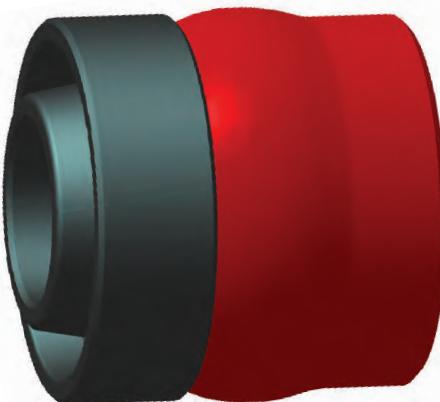

QUICK PUMP-IN™ ROLLER LATCH™ V-LIP PUMP-IN SEAL ASSEMBLY

The NQ™ and HQ™ sized Roller Latch™ assemblies are equipped with new variable lip pump-in seals compatible with Boart Longyear's advanced V-Wall™ coring rods. The new V-Lip Pump-in Seal Assembly is designed to provide a fast and reliable pump-in fluid seal whether tripping through V-Wall or standard wall rods. This assembly is interchangeable with two standard pump-in lip seals.

The advanced design of the V-Lip seal elastically complies to the interior of the drill rod. Energized or driven by the standard lip, the V-Lip maintains a reliable fluid seal and can quickly change its size and shape to accommodate the changes in V-Wall drill rod midbody diameters.

Warning: Link Latch™ head assemblies will not pass though V-Wall drill rods. Only Roller Latch Quick Pump-In heads with V-Lip seals are compatible with V-Wall drill rods.

Standard Lip V-Lip

V-Lip complies with changes in mid-body diameter, maintaining fluid seal. Both the standard lip and V-Lip engage in standard mid body.

QUICK DESCENT™ ROLLER LATCH™ HEAD ASSEMBLY

The Quick Descent™ Roller Latch™ Head Assembly draws on four distinct design enhancements:

Detented Roller Latch™ (All Sizes)

Boart Longyear's patented detented Link Latch™ design enables smooth inner-tube travel and eliminates drag against the rod string inner-wall during descent. When retracted, the latches are completely hidden inside the latch case – allowing the core barrel to travel freely through the rod string.

Latch Indication (All Sizes)

The redesigned fluid control valve provides a positive latch indication signal. This design improvement goes far beyond existing systems that only give landing feedback – drill operators will now see a drilling fluid pressure spike when a positive latch has occurred.

Release Position

Quick Descent Position

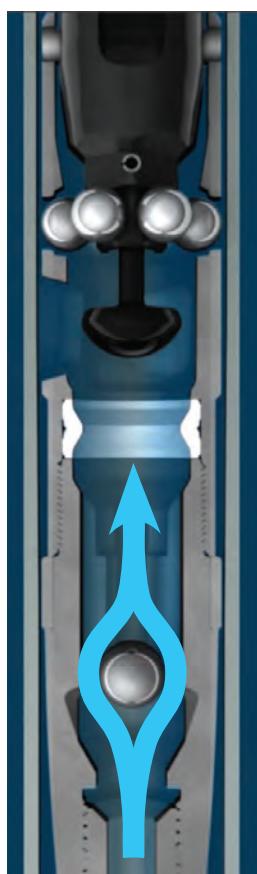

Hollow Spindle (Now in all sizes B-P)

Our unique hollow spindle allows fluid to pass easily through the core barrel – significantly increasing drop speed. The HQ™ hollow spindle passes 2.0 L / s (31 gpm) at 100 kPa (15 psi) compared to the standard core barrel 1.2 L / s (19 gpm) which relies on the inner-tube's outer annulus for all fluid transmission.

Dual Spearhead Positions

The spearhead is pinned to a default upper position to allow operations with overshot release sleeves for low water tables or dry hole lowering. An optional lower position pin location is used to transfer spearhead weight to the latch body extension for quick descent tripping.

Tripping Mode

Drilling Mode

RETRACTING CASE

Position maintained by latch rollers

LATCHES

Retracted in quick-descent mode, deployed in drilling mode

VALVE

Open for tripping and drilling, provides latch indication signal

HOLLOW SPINDLE

Provides fluid bypass porting from inner tube increasing descent speed

CHECK VALVE

Accepts fluid from inner tube when tripping, seals off when drilling

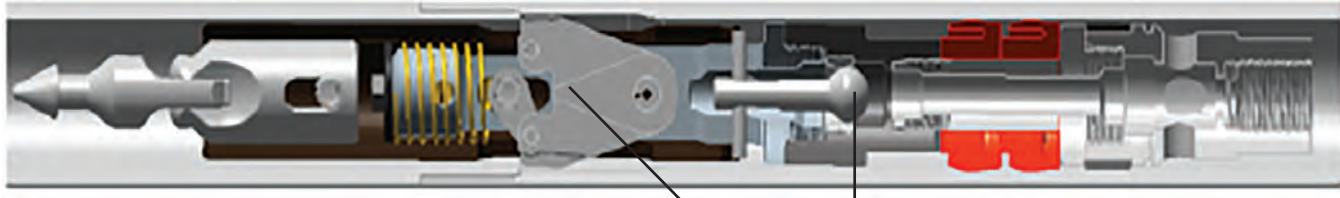

QUICK PUMP-IN™ ROLLER LATCH™ HEAD ASSEMBLY

The Quick Pump-In™ head features all the benefits of the Q™ system plus a range of innovations focused on productivity underground:

- Positive latch indication and latched position locking with valve and bushing interaction.
 - Improved pump-in velocity with dual pump-in lip seals and pump-in valve (O-rings eliminated).
 - Latching mechanism isolated from adverse in-ground fluid or gas pressure with pump-in seals relocated below the latch retracting case.
- WARNING:** To avoid sudden inner-tube expulsion from the hole, do not use obsolete style head assemblies with pump-in seals attached to the latch retracting case.
- Easy loading of inner-tube with interconnected retracting case and latch mechanism eliminating loading sleeves.

- Easier unloading of inner-tube in confined spaces with MKII™ knuckle-head spearpoint.
- Larger fluid porting, pistons and indicator bushings in NQ™, NQ™TK (NQ2) and HQ™ sizes (Roller Latch only).
- MKII Spearheads Standard; Roller Latch heads (NQ & HQ) utilize smaller spearhead bodies to reduce weight and fluid drag.
- Holdback Break Wear Life Indicator Grooves (Roller Latch only).
- Only Roller Latch head assemblies are compatible with V-Wall™ drill rod strings.

Link Latch Drilling Mode

Roller Latch Drilling Mode

HOLD-BACK BRAKE

Retains inner-tube in inclined holes

LOCKING COUPLING

Features integral latch groove to eliminate adapter couplings (Roller Latch only)

LATCHES

Roller Latch technology eliminates drive keys and tangs

VALVE

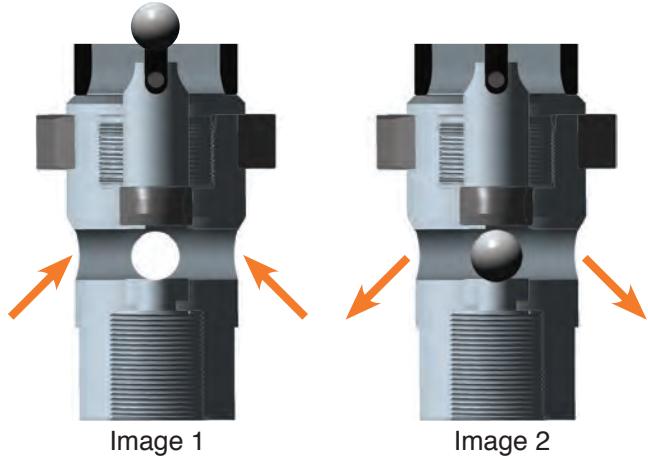

Increased fluid porting, valve piston and indicator bushing size

V-WALL™

New V-Wall rod capable variable-lip pump-in seal assembly (Roller Latch only)

INDICATION AND FLUID CONTROL

The Landing Indicator Valve Ball and Nylon Bushing

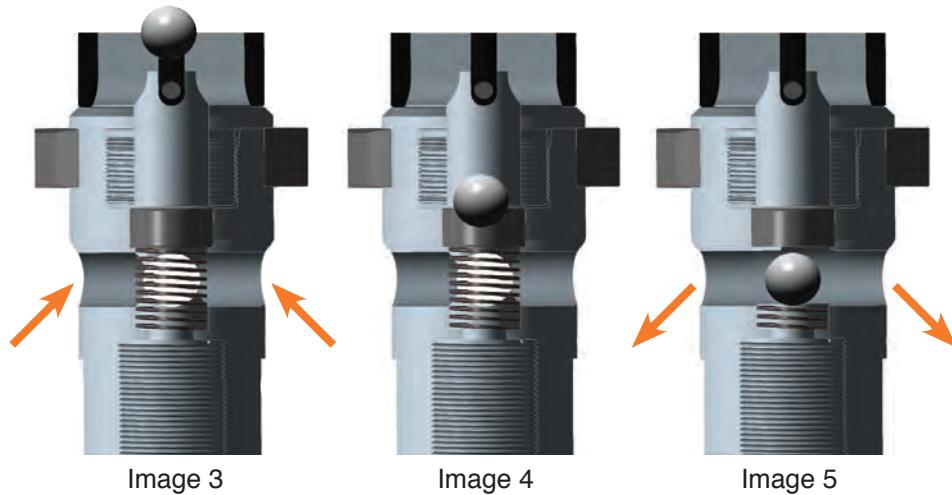

During descent (image 1):
The ball floats above the
nylon bushing which has an
interference fit.

Upon landing (image 2):
The ball creates a pressure
spike indication as it is forced
through the indicator bushing.
Manual resetting is required for
each trip.

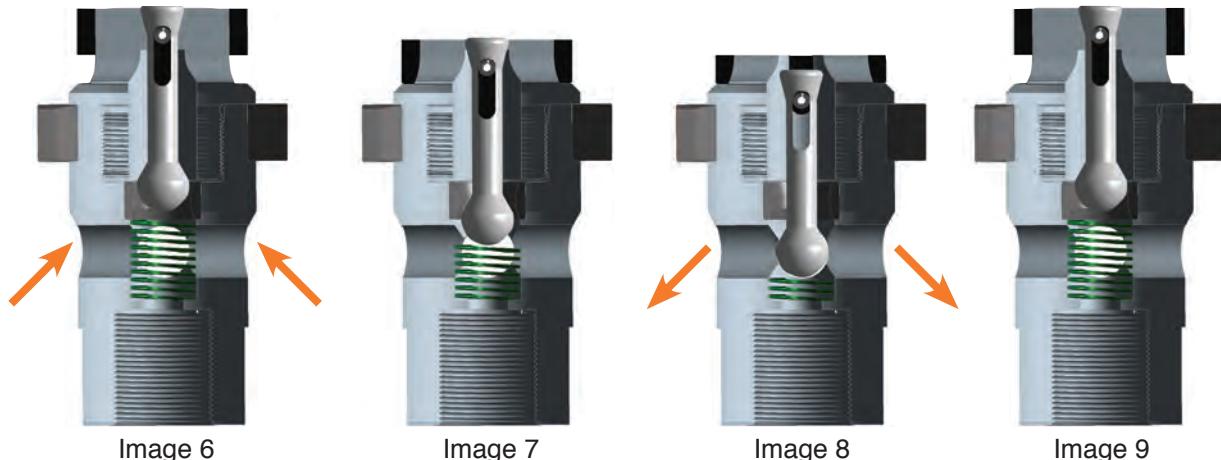

Fluid Retention Valve Ball, Spring and Steel Bushing

During descent (Image 3):
The ball floats above, or seats
in the steel bushing, which
has a very slight clearance.

Upon landing (Images 4-5):
Fluid pressure increases as the ball compresses the spring to
pass thru the bushing. This does not require manual resetting.
The maintained pressure and column of fluid above the head,
depends on the grade of spring (light, medium or heavy). The
entire weight of the column of fluid must be lifted in order to
retrieve the inner-tube.

Dry Hole Fluid Retention Valve Piston, Spring and Steel Bushing*

During descent (image 1):
The valve floats above, or sits in the steel bushing, which has a very slight clearance.

Upon latch deployment (images 7-8):
The valve can only proceed through the bushing after the latches have deployed, allowing the retracting case to drop. Fluid pressure then increases as the valve compresses the spring to pass through the bushing, providing latch indication. Does not require manual resetting. Maintained pressure depends on the grade of spring (light, medium or heavy).

Upon latch retraction (image 9):
The valve is pulled back through the bushing, draining the column of fluid above and allowing the inner-tube to be easily retrieved without lifting the column of fluid.

MKII™ SPEARHEAD ASSEMBLY

Spearhead Redesign

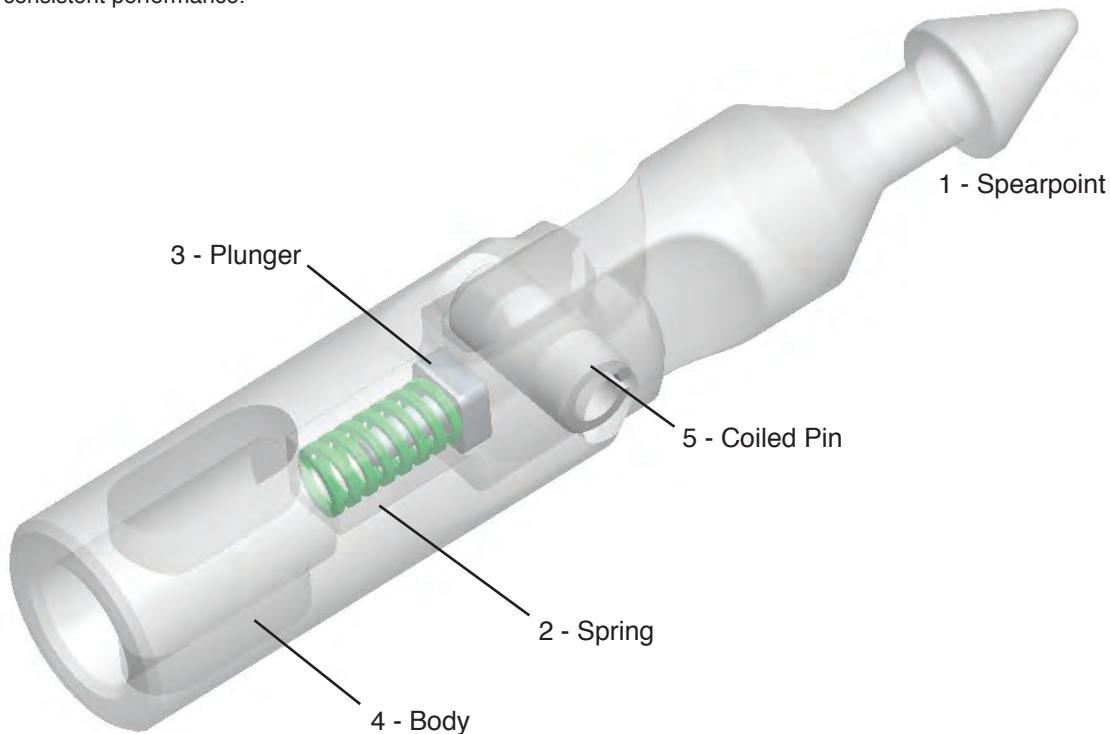

Boart Longyear's spearhead assembly has been redesigned for safer and more efficient inner-tube assembly handling, resulting in increased productivity and precise compatibility with all Q™ wireline head assemblies. Building on the proven technology of the pivoting spearhead design, the patented MKII™ Spearhead is 70% stronger and provides the safest inner-tube handling for drillers.

Strong Platform

The new MKII Spearhead Assembly consists of a redesigned spearpoint and spearhead body for added strength and safety. It also features self-lubricating nylon to reduce wear, self-centering spearpoint with multiple detent positions, and an innovative design to eliminate pinch points.

*This new, heavy duty spring provides a 30% increase in detent positioning strength and is treated for consistent performance.

SELF-LUBRICATED

NYLON PLUNGER

Significantly reduces wear and corrosion, improving ease of maintenance.

INNOVATIVE DESIGN

Unique design maintains Q™ wireline compatibility while eliminating pivot pinch point.

BALANCED MATERIAL

DESIGN

Optimized design is 70% stronger in pull, and 50% stronger in bending, preventing deformation from overload or “off-pivot loading.”

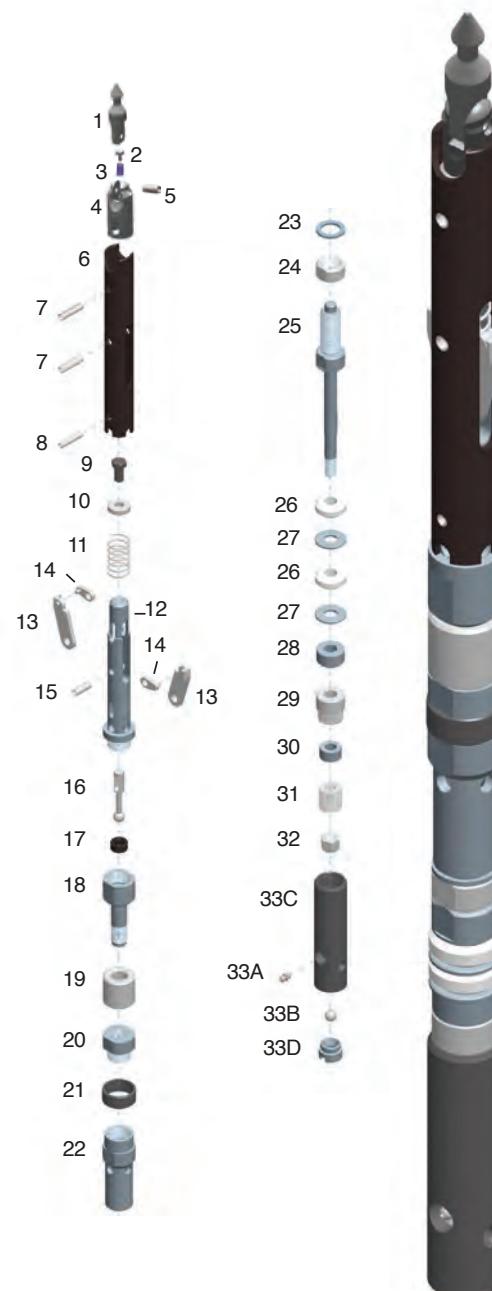

SELF-CENTERING

SPEARPOINT

Multiple ‘self-centering’ pivot detent positions. Now with 30% stronger detent spring.

V-WALL™ RODS: DRILL DEEPER

Global Drilling Products

Offering all the benefits of Boart Longyear's straight-wall coring rods, but weighing up to 30% less - Boart Longyear's advanced V-Wall™ coring rods maximize drilling depths, reduce tripping cycle times and increase work site safety.

And, with Boart Longyear's patented RQ™ thread technology, V-Wall rods offer easier make-and-break connectivity and enhanced rod string strength.

Now available for underground applications when used with Roller Latch™ technology.

ULTRAMATRIX™ DIAMOND CORE BITS

Global Drilling Products

EXTREME PERFORMANCE

Boart Longyear Ultramatrix™ line of diamond coring bits is engineered to meet our customers' demand for extreme performance. UMX™ Bits offer enhanced penetration and bit life to optimize exploration productivity in any ground formation.

UMX Bits feature large diamonds, the strength of the patented Ultramatrix crown, advanced flushing options, and crown heights up to 25 mm with Stage™ waterway.

UMX Bits are an integrated part of the Genuine Q™ Wireline System.

OVERSHOT OVERVIEW

Boart Longyear's overshots are an integral part of the Q™ Wireline system. Once the inner-tube is full of core, the overshot is lowered (or pumped-in for an inclined-hole) to the bottom of the hole. Its heavy-duty lifting dogs grab a secure hold at the top of the inner-tube assembly.

As part of Boart Longyear's commitment to safety on the drill site, we offer the patented EZY-Lock™ overshot for use with the Q Wireline system on surface applications.

EZY-LOCK™ OVERSHOT

The EZY-Lock™ overshot is a favorite of drillers around the world. The safety and productivity features included in the design provide for highly reliable core barrel retrieval for all surface exploration applications.

The EZY-Lock is available for above-ground Q wireline systems in sizes B to P.

Standard Boart Longyear™ overshot features:

- Heavy duty lifting dogs and two compression springs
- Threaded connection between jar staff and overshot head
- High strength alloy steel jar staff with increased diameter and fail safe stop
- Locking sleeve prevents release of inner-tube
- Optional dry hole lowering kit
- New re-usable press-fit pivot-pin, eliminates peening in the field for easy lifting dog maintenance

EZY-Lock Sleeve

Provides a quick, one-handed rotation of the sleeve 90° to lock the overshot lifting dogs to the spearpoint and protects against accidental release.

Quick-release Safety Pin

A detented quick-pin allows for a two-hand-applied lock of the overshot head to the spearpoint. This guards against worn or overloaded lifting dogs.

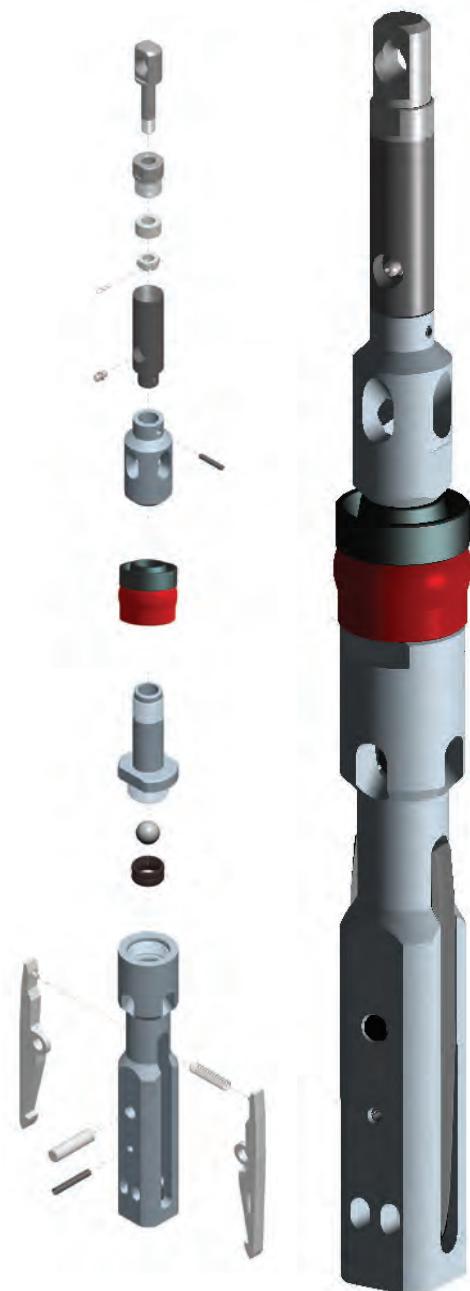

QUICK PUMP-IN™ OVERSHOT

For maximum productivity in underground or pump-in applications, Boart Longyear offers the new Quick Pump-In™ Overshot. This new overshot provides significantly improved pump-in rates with dual pump-in lip-seals; as well as new 'V-Lip' pump-in seals in NQ™ and HQ™ sizes. The variable profile of the 'V-Lip' seal provides improved performance and accommodates both standard wall and V-Wall™ drill rods when used with the new Roller Latch™ underground head assembly.

In addition, this overshot incorporates the proven Boart Longyear™ "Landing Indicator" ball and bushing. The ball and bushing provides a pump-in valve, a bypass valve, and a landing indicator pressure signal. These features function as follows:

- For rapid pump-in rates, the Landing Indicator ball and bushing provides a reliable pump-in seal with optional bushings for light, standard, or deep-hole pressure ratings.
- When the overshot has landed, the valve ball is driven through the valve bushing causing a spike in the fluid pressure. Once the ball is forced through the bushing, fluid can flow through the valve porting.
- When drilling flat or declined holes, the valve allows fluid to bypass the overshot when retrieving from the hole. This significantly improves retraction rates and eliminates the need to refill the hole with drilling fluid.
- When drilling inclined holes the valve allows fluid to bypass the overshot and lift the inner tube. This removes weight from the core barrel latch mechanism, allowing flawless wireline latch retraction and improved retraction rates while preventing latch or wireline cable overload failure or premature wear.
- When retrieving from inclined holes with the new Underground Roller Latch™ head assembly, the valve allows fluid to bypass the overshot and deactivate the hold-back brake allowing the inner-tube to exit the locking coupling and to significantly improve retraction rates while maintaining wireline cable tension during retrieval.
- Upon retrieval, re-seat the valve ball by inserting a tool through the fluid ports and manually forcing the ball back through the bushing.

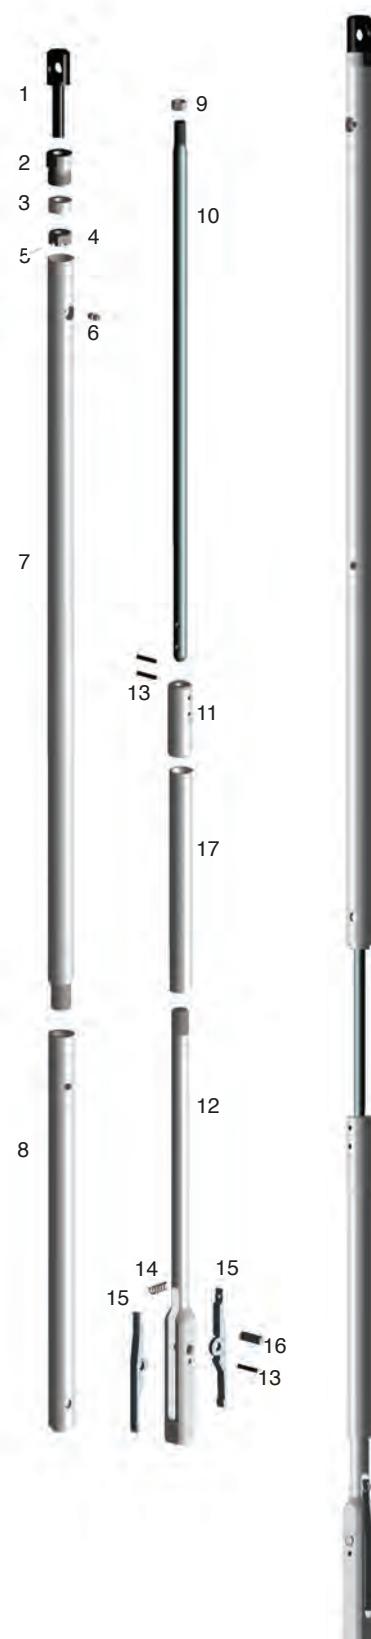

Warning: Quick Pump-In overshots no longer include a second optional valve ball. Do not block fluid porting and do not disable the fluid bypass valve in inclined hole applications. Fluid pressure is required to ensure proper latch mechanism functionality, to deactivate the hold-back brake on the Roller Latch underground head assembly, and to avoid overload and premature wear.

Note: The AQ™TKU overshot has been redesigned to use the same landing indicator balls and bushings as the other size overshots.

AQ™ TKU LOADING CHAMBER 3541814

Application:

- Underground applications with AQ™ TKU core barrel and ARQTK rods.
- Used to pump the overshot into the rod string for retrieval of the inner-tube assembly.
- Identification groove supplied on ARQTK loading chamber body.
- Use 1' rod extension with Roller Latch head assemblies.

CORE LIFTERS

Slotted	Fluted	Spiral
<ul style="list-style-type: none"> Ideal for use in competent ground conditions Increased grip area with the core sample Also known as the "Brown Style" core lifter 	<ul style="list-style-type: none"> Ideal for use in broken ground Increased flexibility; ideal for use when encountering irregular core Also known as a "broached" core lifter 	<ul style="list-style-type: none"> Ideal for use in ultra hard ground conditions Only available in AQ™TK sizing

Standard Core Lifters Features

Boart Longyear™ core lifters are made of high-quality alloy steel and are heat treated to increase strength, toughness and wear life.

Diamond-Coated Core Lifters Features

Diamond-coated core lifters add a thin composite diamond-coating (CDC) of a hard metal alloy impregnated with synthetic micro-diamonds. The diamond coating process provides superior wear resistance. Based on field results, the diamond coated core lifter returns approximately 300% longer life as compared to a standard core lifter.

Inner-tube Features

Boart Longyear offers the option of **chrome plating** that provides a tough abrasion-resistant coating which increases product life and improves core recovery. Simply add a "CP" suffix to the inner-tube, coupling or Extenda item number when ordering.

AVAILABLE LENGTHS:

Inner-tube - 1.5 M / 5.0 FT
Inner-tube - 3.0 M / 10.0 FT

INNER-TUBE COUPLINGS AND EXTENDAS

61129	AQTK Coupling
62200	AQTK Extenda 1.5 M / 5.0 FT
31402	BQ Coupling
64584	BQ Extenda 1.5 M / 5.0 FT

104884	NQTK* Extenda 1.5 M / 5.0 FT
31404	HQ Coupling
5000854	PQ Extenda 3.0M/10.0 FT

Core barrel inner-tubes can be extended by either adding a second inner-tube and coupling, or by using a one piece Extenda.

Note that couplings and extendas add significant length to make-up for the additional outer tube length that is added when extending a core barrel. Outer tubes have additional length because they accommodate the length of the head assembly.

SPLIT TUBES (not available in chrome plated)

26527	NQ3 Split tube 1.5 M / 5.0 FT
26528	NQ3 Split tube 3.0 M / 10.0 FT
26512	HQ3 Split tube 1.5 M / 5.0 FT
26513	HQ3 Split tube 3.0 M / 10.0 FT
26180	PQ3 Split tube 1.5 M / 5.0 FT
26710	PQ3 Split tube 3.0 M / 10.0 FT

The Boart Longyear **exclusive Q™3 System** is designed to be used in broken ground where core recovery is difficult. The split tube liner sits inside the standard inner-tube and keeps the sample intact.

Link Latch™ Couplings Product Features

Link Latch™ locking couplings are made out of quench and tempered alloy steel for improved wear life and strength. Their hardened shoulder face resists abrasive wear from mating latches for improved latching reliability.

Boart Longyear offers the option of a tang, which is the tab of steel located on the pin end of the locking coupling. The tang acts as a physical stop against the core barrel head latches, and ensures the core barrel head

STABILIZED Locking Coupling Features

- New spiral wear pads with high density tungsten for improved wear life.
- Can be used in all drilling conditions.

Full-hole Locking Coupling Features

- Oversized-pads for improved hole stabilization.
- Pads induction-hardened for increased wear resistance.
- For use in competent ground conditions.
- Hard-faced latch resting area for increased latching reliability.

rotates with the rod string. This eliminates latch wear against the locking coupling. These tangs are to be used for surface applications only. Please refer to the adapter coupling page for underground applications (page 171).

NOTE: Not compatible with Roller Latch™ head assemblies.

Roller Latch Locking Couplings are not compatible with Link Latch Adapter Couplings.

Do not use tanged couplings with QU systems.

ADAPTER COUPLINGS - LINK LATCH™

5000855CP	PQ Outer-tube Extenda 3.0 M / 10.0 FT

Chrome Plated Outer-tube Features

Boart Longyear offers the option of **chrome plating** which provides a tough, abrasion resistant coating that increases product life and durability.

General Product Features

- Boart Longyear™ outer-tubes are made of high-quality alloy steel for increased durability.
- The PQ outer tube Extenda is equivalent to the standard PQ outer tube but uses a standard outer tube box thread rather than the PHD rod box thread used on the outer tube and couplings.

OUTER-TUBES

FULL-HOLE OUTER-TUBES

3545384	AQTK Outer-tube 1.5 M / 5.0 FT
3545385	AQTK Outer-tube 3.0 M / 10.0 FT

3545391	NQ Outer-tube 3.0 M / 10.0 FT
3545392	HQ Outer-tube 1.5 M / 5.0 FT
3545393	HQ Outer-tube 3.0 M / 10.0 FT

Full-hole Outer-tube Features

- Oversized pads for improved core barrel stabilization.
- Available with chrome plated outer surface.
- For use in competent ground conditions.
- Available in A-H sizes.

General Product Features

Full-hole Systems (locking coupling and Outer-tube) are suited for competent ground formations where hole accuracy is a top priority. The four-flat design keeps the core barrel system tight to the hole while allowing plenty of cutting flow. Note that while hole deviation is minimized with this system, higher drilling pressures will be experienced.

FLEXIBLE OUTER-TUBE KITS

Flexible Outer-tube Features

- Flexible outer tube used to ease travel over wedges or to aggressively steer the hole on its own.
- For use in all drilling conditions.
- Available in B-H sizes

General Product Features

- Boart Longyear™ flexible outer-tubes are made of high-quality alloy steel for increased durability.
- The increased flexibility produces enhanced steering under normal operating parameters

WATER SWIVELS

Overview

For continuous operation without downtime, Boart Longyear offers a full selection of Water Swivels with replaceable V-ring packing style seal gland for standard drilling applications.

Water Swivel Features:

- Available in underground, compact, standard duty, and heavy duty versions with accordingly sized spindle porting and an NPT side fluid supply connection
- Spring loaded, self-adjusting gland packings ensure reliable seal.
- Easily replaceable hardened packing wear sleeves protect the spindle from packing wear.
- Weep holes prevent any leakage past the packing from reaching the bearing, and also indicate packing condition to the operator.
- Protected grease fitting to allow easy lubrication of bearings. Lubrication path conducts contaminants away from the bearing and relieves excess lubrication pressure.
- Easily disassembled with pipe wrenches, a screw driver, spanner wrench, and soft mallet, for easy packing or wear sleeve replacement.
- Suitable for use with water or drilling mud only. Packings and mating wear sleeves are subject to wear and generally operate with a small degree of leakage depending on rpm and vibration levels.
- Adapter Subs are available to adapt to Q™, RQ™, and RQTK drill rods

- #20 NPT hose connection
- NW rod box spindle connection
- 1-1/2" spindle fluid porting

Note: The Belleville washer [ID# 8] must be installed oriented pointing down, with the small end mated against the thrust washer.

LEGEND: Standard Component Required - Choose One [OPT] Optional Component

HIGH-SPEED WATER SWIVEL

Overview

For continuous operation without downtime, Boat Longyear offers a full selection of High Speed Water Swivels with replaceable mechanical “end-face” seals suited for operation with high rpm drills.

High-speed Water Swivel Features:

- Available in sizes suited for wireline drill rods with accordingly sized spindle fluid porting and a #12 JIC rear fluid supply connection: ARQ™TK, BRQTK, BQ™, BRQ, NQ & NRQ.
- Spring loaded, self-adjusting and self-aligning end-face seals absorb vibration at high rpm (OEM rated to 600 psi at 1800 rpm).
- Weep holes prevent any leakage past the seal from reaching the bearing, and also indicate seal condition to the operator.
- Protected grease fitting to allow easy lubrication of bearings. Lubrication path conducts contaminants away from the bearing and relieves excess lubrication pressure.
- Easily disassembles with pipe wrenches, a screw driver, spanner wrench, and soft mallet, for easy seal or bearing replacement.
- Suitable for use with water or drilling mud.
- Mates directly to Q™, RQ™, and RQTK drill rods.

WARNING: Ensure the rough surface of the face seal is towards the bearing. Do not use hydrocarbon based liquids on the shaft bellows, and do not use grease (including silicon grease).

Hoist Plug Features:

- Long-life thrust bearing provides pivot for ease of connecting, and reduces hoisting cable winding during hoisting and lowering.
- 12.5 mm (0.5 in) diameter down-angled vent is incorporated into the body to eliminate side spray from pressurized drilling fluid.
- Ventless bearing chamber allows for optional oil bath for cold weather operation.
- NW rod box housing connection.

LF™ 130F CORING DRILL

Global Drilling Products

MAXIMIZE PRODUCTIVITY

With a depth capacity of more than 1350 m NQ™, the flyable LF™ 130F core drill delivers excellent productivity and cutting-edge safety features.

Featuring our remote-controlled LM™ rod handler with laser-perimeter safety system, patented fail-safe Nitro-chuck™, interlocked rotation barrier and lift-to-shift control levers.

3542885	NW Rod Pin to HRQ Rod Pin
3542933	NW Rod Pin to HP Rod Pin
102912	NW Rod Pin to PHD Rod Pin

- Identification groove supplied on ARQ™TK and BRQTK subs.

Water Swivel Adapter Sub

Features:

- The rod pin threads are electric induction hardened to ensure long life and minimize rod box thread galling, extending drill rod thread-life and joint performance.
- Identification groove supplied on ARQ™TK and BRQ™TK subs.

Standard Duty / Heavy Duty / Plug to Rod	
102912	NW Rod Pin to PHD Rod Pin
3544177	NW Rod Pin to PWT Casing Pin

Hoisting Plug Adapter Features:

- The rod pin threads are electric induction case hardened to ensure long life and minimize rod box thread galling, extending drill rod thread life and joint performance.
- Identification groove supplied on ARQ™TK and BRQ™TK subs.

Bullnose Adapter Subs:

- Curved lead-in nose guides the sub into the rod box eliminating unwanted "stabbing" damage.
- Sub thread has minimum "stand-off" allowing it to be made-up fully by hand ensuring a full capacity connection.

6	3545167	PWT Casing Pin to Solid Blank
7	102924	PHD Rod Box to Tubing Blank
8	103054	PHD Rod Pin to Tubing Blank

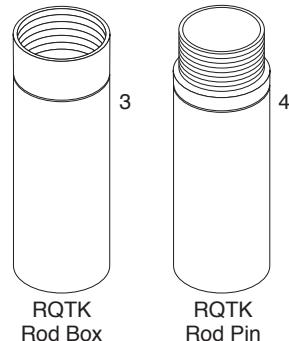

Application:

Blank end adapter subs enable you to create adapter subs according to your unique requirements. They are supplied as rod pin or rod box to either solid blank bar end or tubing blank end. Solid bar end subs are for use with hoist plugs and water swivels ONLY. They are NOT for use as cross over subs. Thread stand off is adjusted for hand tight makeup. Identification groove supplied on ARQ™TK and BRQ™TK accessories.

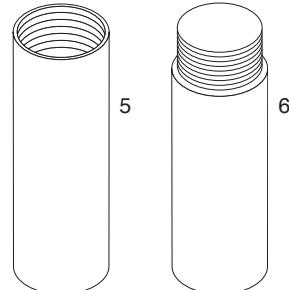

Solid Blank Bar End Sub

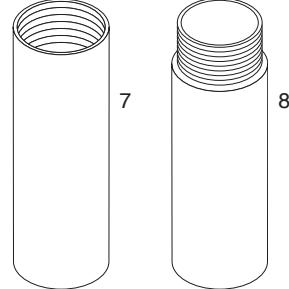

Tubing Blank End Sub

Solid Blank Bar End Sub

Tubing Blank End Sub

Warning:

Do not bore solid pin end subs greater than 25 mm (1 inch) to avoid shrinkage due to heat treat stresses.

WATER SAVER SUBS

ID #	PART #	DESCRIPTION
1	3540170	ARQTK Water Saver Sub
2	3542641	BRQ Water Saver Sub
1	3541898	BRQTK Water Saver Sub
2	101606	BQ Water Saver Sub
2	3542642	NRQ Water Saver Sub
2	3542276	NQ Water Saver Sub
2	3542643	HRQ Water Saver Sub
2	3542919	HQ Water Saver Sub
3	5008514	Valve Spear, Loading Chamber

Application:

The Water Saver Sub includes a check valve feature that retains the column of drilling fluid in the rod string in up-angled or inclined holes. It can also be used to save time and increase production by eliminating the need to re-fill the rod string each time a rod is added when using extended core barrels.

Identification groove supplied on ARQ™TK and BRQ™TK accessories.

Application:

While fluid columns can be drained from swivels and loading chambers with appropriate bypass and drainage plumbing, the valve spear is required to lift the check valve ball in water saver subs and enable safe drainage of any retained fluid column.

WIRELINE CABLE TOOLS

These items are used in conjunction with wireline cable.

ID #	PART #	DESCRIPTION
1	30172	Oval Sleeve, 3/16" or 5 mm
2	30171	Crimping Tool 3/16" or 5mm
1	60382	Oval Sleeve, 1/4"
2	34848	Crimping Tool, 1/4"

CAUTION: Sleeves elongate after compression. To assure maximum holding, allow the end of the cable to extend beyond the sleeve after it is compressed. All compressions must be gauged to assure maximum holding strength, and it is recommended that all assemblies should be proof-tested.

LEGEND: Standard Component Required - Choose One [OPT] Optional Component

HEAD ASSEMBLY TOOLS

The head assembly tool is used to drive in the spring pin when assembling links and latches or Roller Latch™ head assemblies.

ID #	PART #	DESCRIPTION	QTY
1	3542826	A-size Head Assembly Drift Tool	1
1	3542827	B-size Head Assembly Drift Tool	1
1	3542987	N / H / P Link Latch Drift Tool	1
2	5007707	A-Sized Roller Latch Assembly Tool	1
2	5007708	B / N / H-Sized Roller Latch Assembly Tool	1

INNER-TUBE LOADING SLEEVE

The loading sleeve is recommended for loading the inner-tube assembly into the core barrel outer-tube assembly or rod string.

ID #	PART #	DESCRIPTION	QTY
1	61353	ARQTK Inner-tube Loading Sleeve	1
1	3542636	BQ / BRQ Inner-tube Loading Sleeve	1
1	61663	BQTK / BRQTK Inner-tube Loading Sleeve	1
1	3542637	NQ / NQR Inner-tube Loading Sleeve	1
1	3542638	HQ / HQR Inner-tube Loading Sleeve	1

RELIEF VALVE

This rugged pressure relief valve ensures protection of your pump during drilling operations. It automatically snaps to full open position when the predetermined pressure is exceeded. The pressure setting can be adjusted within the operating range by simply turning the adjusting screw on the top of the valve.

ID #	PART #	DESCRIPTION	QTY
1-8	3546492	Pressure Relief Valve	1
1	21841	Adjusting Screw	1
2	22179	Jam Brass Hex Nut, 5/8" UNC	1
3	3546493	Body	1

2	26739	Hose Assembly, 8 FT x 1/2" NPT- Male	1
3	26741	Globe Valve, 1/2" NPT	1
4	17905	Close Nipple, 1/2" NPT	2
5	29257	Quick Coupling, 1/2" NPT- Female	1
6	29258	Quick Coupling, 1/2" NPT- Male	1
7	21413	Hex Bushing, 3/4" x 1/2"	1

PUMP-OUT GROUP

⚠ WARNING

Keep hands and body clear of open rods while operating. Failure to do so could result in serious injury or death.

Pressure build-up behind the Q™3 piston may cause sudden, explosive ejection of the core sample. Keep hands and body away from open end of pressurized inner-tubes.

Casing Recovery Taps Adapter Subs			
3540307	ARQTK Rod Box to AW Rod Pin	1.30	2.80
3542379	BRQ Rod Box to BW Rod Pin	2.30	5.00
3543008	BRQTK Rod Box to BW Rod Pin	2.00	4.30
25485	BQ Rod Box to BW Rod Pin	2.30	5.00
3542825	NRQ Rod Box to NW Rod Pin	3.30	7.20
24931	NQ Rod Box to NW Rod Pin	3.30	7.20

Casing Recovery Taps Features:

- Boart Longyear offers casing recovery taps that have parallel walls, and self-tapping threads for full penetration, improved recovery connection and longer tap life
- Right hand thread

OUTER-TUBE RECOVERY TAPS

PART #	DESCRIPTION	KG	LB
Outer-tube Recovery Taps			
3544204	AQTK Outer-tube Recovery Tap	2.30	5.07

Outer-tube Recovery Taps Features:

- Parallel wall, self-tapping thread allows for full penetration, improved recovery connection and longer tap life.
- Right hand thread.
- Identification groove supplied on ARQ™TK rod recovery tap box end.

WARRANTY

Limited Warranty.

(a) Consumables. Boart Longyear warrants for a period of one (1) year after the date of shipment of the consumable products manufactured by it, or the performance of related services, under the Contract, that such consumable products are free from defects in materials and workmanship and such services are performed in a professional and workmanlike manner; provided, however, with respect to consumable products purchased through an authorized Boart Longyear distributor, the warranty period shall commence on the date of purchase by the end-user.

(b) Capital Equipment. Boart Longyear warrants that the capital equipment manufactured by it is free from defects in materials and workmanship for a period equal to the lesser of (i) one (1) year after the date of shipment, or (ii) the initial 1,000 operating hours. Boart Longyear warrants for a period of six (6) months after the performance of related services that such services are performed in a professional and workmanlike manner.

(c) General Terms. Boart Longyear further warrants that, to the extent applicable, as of the date of shipment or performance, all goods manufactured by it and services performed shall conform to the written specifications agreed between the parties. THIS IS BOART LONGYEAR'S ONLY WARRANTY. BOART LONGYEAR MAKES NO OTHER WARRANTY, INCLUDING WITHOUT LIMITATION, ANY WARRANTY OF MERCHANTABILITY OR FITNESS FOR A PARTICULAR PURPOSE. As a condition to Boart Longyear's warranty obligations, Purchaser must: (i) contact Boart Longyear and request authorization to return any goods claimed to be defective promptly upon Purchaser's discovery of the alleged defect, (ii) upon receipt of an approved authorization code from Boart Longyear, return any goods claimed to be defective under the foregoing warranty, at Purchaser's expense, to the facility designated by Boart Longyear, and (iii) with respect to consumable products purchased through an authorized Boart

Longyear distributor, the party making the warranty claim must also deliver to Boart Longyear reasonable evidence of the date of purchase. Boart Longyear shall perform its examination of the goods so returned by Purchaser and shall report the results of its examination to Purchaser within thirty (30) days following its receipt of such goods from Purchaser, or, if longer time is required to complete such examination, within such time as would be required through the exercise of reasonable diligence. As a further condition to Boart Longyear's obligations hereunder for breach of warranty, Purchaser shall offer its reasonable cooperation and assist Boart Longyear in the course of Boart Longyear's review of any warranty claim. If requested by Purchaser, Boart Longyear will promptly repair or replace, at Boart Longyear's expense, goods that are confirmed to be non-conforming as a result of Boart Longyear's examination and according to Boart Longyear's warranty as set forth herein. All removal and installation of goods shall be at Purchaser's expense; provided, however, Boart Longyear will reimburse the Customer for an amount equal to the reasonable expenses incurred by the Customer and attributable to the removal and shipment of any defective goods. Boart Longyear reserves the right to reimburse Purchaser for an amount equal to the purchase price of any defective goods in lieu of providing repaired or replacement goods. Anything contained herein to the contrary notwithstanding, in no event shall Boart Longyear be liable for breach of warranty or otherwise in any manner whatsoever for: (i) normal wear and tear; (ii) corrosion, abrasion or erosion; (iii) any goods, components, parts, software or services which, following delivery or performance by Boart Longyear, has been subjected to accident, abuse, misapplication, modification, improper repair, alteration, improper installation or maintenance, neglect, or excessive operating conditions; (iv) defects resulting from Purchaser's specifications or designs or those of its contractors or subcontractors other than Boart Longyear; (v) defects associated with consumable parts or materials, the lifetime of which is shorter than the warranty period set forth in this Section; (vi) defects associated with

Purchaser's specifications or designs or those of its contractors or subcontractors other than Boart Longyear; (vii) defects resulting from the manufacture, distribution, promotion or sale of Purchaser's own products; or (viii) accessories of any kind used by the Purchaser which are not manufactured by or approved by Boart Longyear.

(d) Sourced Goods. If the defective parts or components are not manufactured by Boart Longyear, the guarantee of the manufacturer of those defective parts or components is accepted by the Purchaser and is the only guarantee given to the Purchaser in respect of the defective parts or components. Boart Longyear agrees to assign to the Purchaser on request made by the Purchaser the benefit of any warranty or entitlement to the defective parts or components that the manufacturer has granted to Boart Longyear under any contract or by implication or operation of law to the extent that the benefit of any warranty or entitlement is assignable.

(e) Limitation on Liability. Except as provided for herein, in no event will Boart Longyear be liable for any indirect, incidental, special, consequential, punitive or similar damages including, but not limited to, lost profits, loss of data or business interruption losses. In no event will the total, aggregate liability of Boart Longyear under the Contract exceed the value of the Contract under which liability is claimed. The liability limitations shall apply even if Boart Longyear has been notified of the possibility or likelihood of such damages occurring and regardless of the form of action, whether in contract, negligence, strict liability, tort, products liability or otherwise. The parties agree that these limits of liability shall survive and continue in full force and effect despite any termination or expiration of any Contract. Any action by Purchaser against Boart Longyear must be commenced within one year after the cause of action has accrued. No employee or agent of Boart Longyear is authorized to make any warranty other than that which is specifically set forth herein. The provisions in any specification, brochure or chart issued by Boart Longyear are descriptive only and are not warranties.
